

The next step in visual privacy protection

3M™ ePrivacy Filter

An innovative software solution that completes visual privacy protection

In today's high-traffic, mobile world, more and more confidential information is being exposed on users' laptops. Now you can complete your visual privacy protection and help prevent visual hacking with an easy-to-implement software solution — 3M™ ePrivacy Filter.

Security-enhancing features

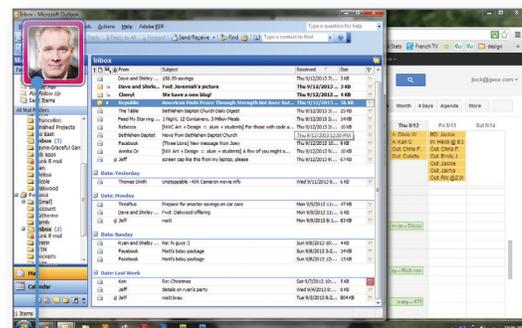

A 3M™ Privacy Filter is great for protection from side angles but leaves you susceptible to views from behind. 3M™ ePrivacy Filter software alerts users to over-the-shoulder onlookers, so users can focus on work, not on who may be peeking at their screen.

3M™ ePrivacy Filter software works seamlessly with your laptop's webcam and includes these security-enhancing features:

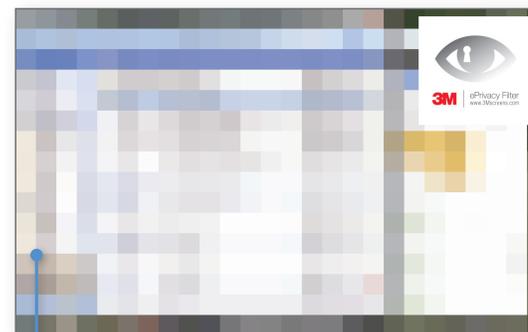

- **Facial recognition**
Recognizes authorized user via webcam.
- **Intrusion detection**
Alerts the user with a pop-up of the intruder's face.
- **Walk-away privacy**
Blurs the screen when the user looks or walks away. Reveals the screen when the user returns.

The setting can be adjusted to enhance or reduce the level of privacy based on your needs. The software is compatible with Windows® XP and higher.

It works like an intelligent rearview mirror

Intruder detected

Blurred view

go anywhere.
do more.

A comprehensive 180° privacy solution*

When used together, 3M™ ePrivacy Filter software and a 3M™ Privacy Filter provide visual privacy from virtually every angle — up to 180° of privacy protection.

3M™ ePrivacy Filter Software

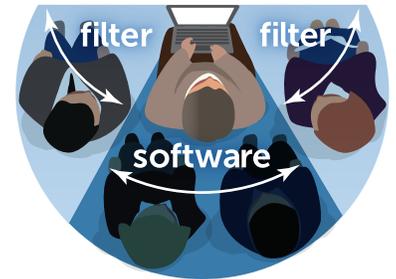

Alerts the user to over-the-shoulder onlookers and causes the screen to blur when the user looks or steps away.

3M™ Privacy Filter

Allows a clear image from the front while onlookers will only see a dark screen from side angles.

Privacy

from every angle

3M™ ePrivacy Filter Software + 3M™ Privacy Filter

* Privacy coverage is dependent on webcam's field of view
