

EPC2100 – Enhancement-Mode GaN Power Transistor Half-Bridge

V_{DS} , 30 V

$R_{DS(on)}$, 8.2 mΩ (Q1), 2.1 mΩ (Q2)

I_D , 10 A (Q1), 40 A (Q2)

Gallium Nitride's exceptionally high electron mobility and low temperature coefficient allows very low $R_{DS(on)}$, while its lateral device structure and majority carrier diode provide exceptionally low Q_G and zero Q_{RR} . The end result is a device that can handle tasks where very high switching frequency, and low on-time are beneficial as well as those where on-state losses dominate.
