November 2017

MIL-STD-1553 / 1760 3.3V Monolithic Dual Transceivers

DESCRIPTION

The HI-1579 and HI-1581 are low power CMOS dual transceivers designed to meet the requirements of the MIL-STD-1553 and MIL-STD-1760 specifications.

The transmitter section of each bus takes complementary CMOS / TTL Manchester II bi-phase data and converts it to differential voltages suitable for driving the bus isolation transformer. Separate transmitter inhibit control signals are provided for each transmitter.

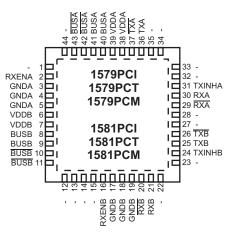

The receiver section of the each bus converts the 1553 bus bi-phase data to complementary CMOS / TTL data suitable for input to a Manchester decoder. Each receiver has a separate enable input, which forces the receiver outputs to logic "0" (HI-1579) or logic 1 (HI-1581).

To minimize the package size for this function, the transmitter outputs are internally connected to the receiver inputs, so that only two pins are required for connection to each coupling transformer.

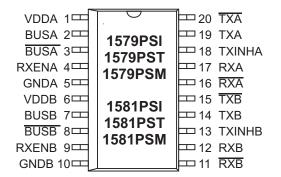

FEATURES

- Compliant to MIL-STD-1553A and B, MIL-STD-1760 and ARINC 708A
- 3.3V single supply operation
- Smallest footprint available in 7mm x 7mm 44 pin plastic chip-scale package (QFN)
- Industrial and extended temperature ranges
- Industry standard pin configurations

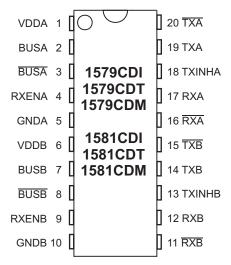

PIN CONFIGURATIONS

44 Pin Plastic 7mm x 7mm Chip-scale package

20 Pin Plastic ESOIC - WB package

20 Pin Ceramic DIP package

HI-1579, HI-1581

FUNCTIONAL DESCRIPTION

The HI-1579 family of dual data bus transceivers contains differential voltage source drivers and differential receivers. It is intended for applications using a MIL-STD-1553 A/B data bus. The device produces a trapezoidal output waveform during transmission.

TRANSMITTER

Data input to the device's transmitter section is from the complementary CMOS inputs TXA/B and TXA/B. The transmitter accepts Manchester II bi-phase data and converts it to differential voltages on BUSA/B and BUSA/B. The transceiver outputs are either direct- or transformer-coupled to the MIL-STD-1553 data bus. Both coupling methods produce a nominal voltage on the bus of 7.5 volts peak to peak.

The transmitter is automatically inhibited and placed in the high impedance state when both TXA/B and $\overline{TXA/B}$ are driven with the same logic state. A logic "1" applied to the TXINHA/B input forces the transmitter to the high impedance state, regardless of the state of TXA/B and $\overline{TXA/B}$.

RECEIVER

The receiver accepts bi-phase differential data from the MIL-STD-1553 bus through the same direct- or transformer- coupled interface as the transmitter. The re-

ceiver's differential input stage drives a filter and threshold comparator to produce CMOS data at the RXA/B and RXA/B output pins. When the MIL-STD-1553 bus is idle and RXENA or RXENB are high, RXA/B will be logic "0" on HI-1579 and logic "1" on HI-1581.

The receiver outputs are forced to the bus idle state (logic "0" for HI-1579 or logic "1" for HI-1581) when the RXENA or RXENB is low.

MIL-STD-1553 BUS INTERFACE

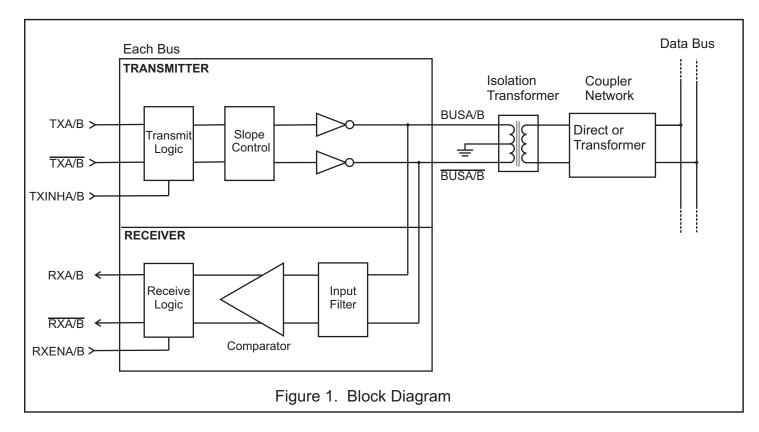

A direct-coupled interface (see Figure 2) uses a 1:2.5 ratio isolation transformer and two 55 ohm isolation resistors between the transformer and the bus. The primary center-tap of the isolation transformer must be connected to GND.

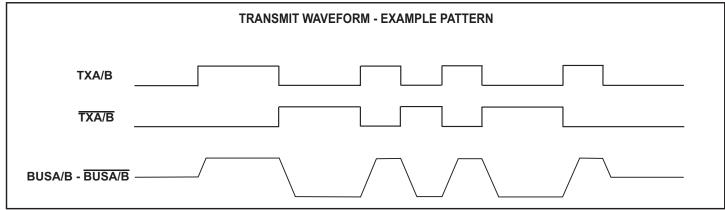

In a transformer-coupled interface (see Figure 2), the transceiver is also connected to a 1:2.5 isolation transformer which in turn is connected to a 1:1.4 coupling transformer. The transformer coupled method also requires two coupling resistors equal to 75% of the bus characteristic impedance (Zo) between the coupling transformer and the bus.

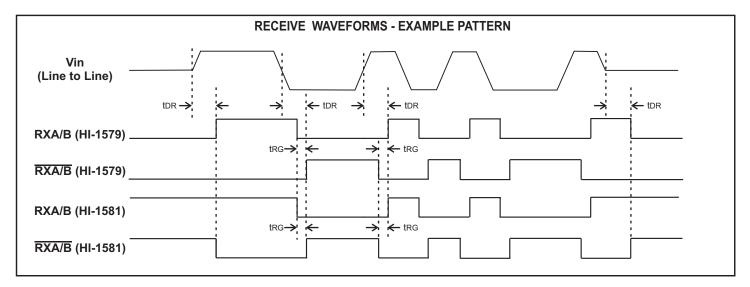

Figure 3 and Figure 4 show test circuits for measuring electrical characteristics of both direct- and transformercoupled interfaces respectively. (See electrical characteristics on the following pages).

HOLT INTEGRATED CIRCUITS

HI-1579, HI-1581

HOLT INTEGRATED CIRCUITS 3

ABSOLUTE MAXIMUM RATINGS

Supply voltage (VDD)	-0.3 V to +5 V
Logic input voltage range	-0.3 V dc to +3.6 V
Receiver differential voltage	50 Vp-p
Driver peak output current	+1.0 A
Reflow Solder Temperature	260°C
Junction Temperature	175°C
Storage Temperature	-65°C to +150°C

RECOMMENDED OPERATING CONDITIONS

Supply Voltage	
VDD 3.3V ±5%	
Temperature Range	
Industrial40°C to +85°C	

Hi-Temp -55°C to +125°C

NOTE: Stresses above absolute maximum ratings or outside recommended operating conditions may cause permanent damage to the device. These are stress ratings only. Operation at the limits is not recommended.

DC ELECTRICAL CHARACTERISTICS

 V_{DD} = 3.3 V, GND = 0V, TA = Operating Temperature Range (unless otherwise specified).

PARAMETER	SYMBOL	CONDITION	MIN	ТҮР	MAX	UNITS
Operating Voltage	Vdd		3.15	3.30	3.45	V
Total Supply Current	ICC1	Not Transmitting		10	17	mA
-	Icc2	Transmit one bus @ 50% duty cycle		290	320	mA
-	Іссз	Transmit one bus @ 100% duty cycle		590	650	mA
Power Dissipation	PD1	Not Transmitting		0.033	0.06	W
-	PD ²	Transmit one bus @ 100% duty cycle		0.86	1.1	W
Min. Input Voltage (HI)	Vih	Digital inputs	2.0			V
Max. Input Voltage (LO)	VIL	Digital inputs			30%	VDD

Inhibit Delay	tdi-н	Inhibited output			100	ns
	tdi-L	Active output			150	ns

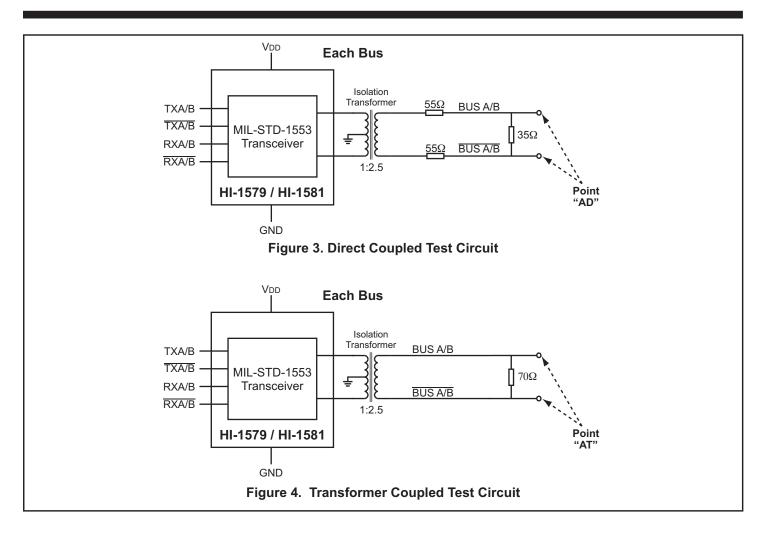

Note 1. Measured using a 1 MHz sinusoid, 20 V peak to peak, line to line at point "AT" (Guaranteed but not tested).

Note 2. Measured using a 1 MHz sinusoid, 860 mV peak to peak, line to line at point "AT" (100% tested).

Note 3. Measured using a 1 MHz sinusoid, 860 mV peak to peak, line to line at point "AT". Measured from input zero crossing point.

HI-1579, HI-1581

HEAT SINK ESOIC & CHIP-SCALE PACKAGES

The HI-1579PSI/T/M and HI-1581PSI/T/M use a 20-pin thermally enhanced SOIC package. The HI-1579PCI/T/M and HI-1581PCI/T/M use a plastic chip-scale package (QFN). These packages include a metal heat sink located on the bottom surface of the device. This heat sink may be soldered down to the printed circuit board for optimum thermal dissipation. The heat sink is electrically isolated and may be soldered to any convenient power or ground plane.

APPLICATIONS NOTE

Holt Applications Note AN-500 provides circuit design notes regarding the use of Holt's family of MIL-STD-1553 transceivers. Layout considerations, as well as recommended interface and protection components are included.

RECOMMENDED TRANSFORMERS

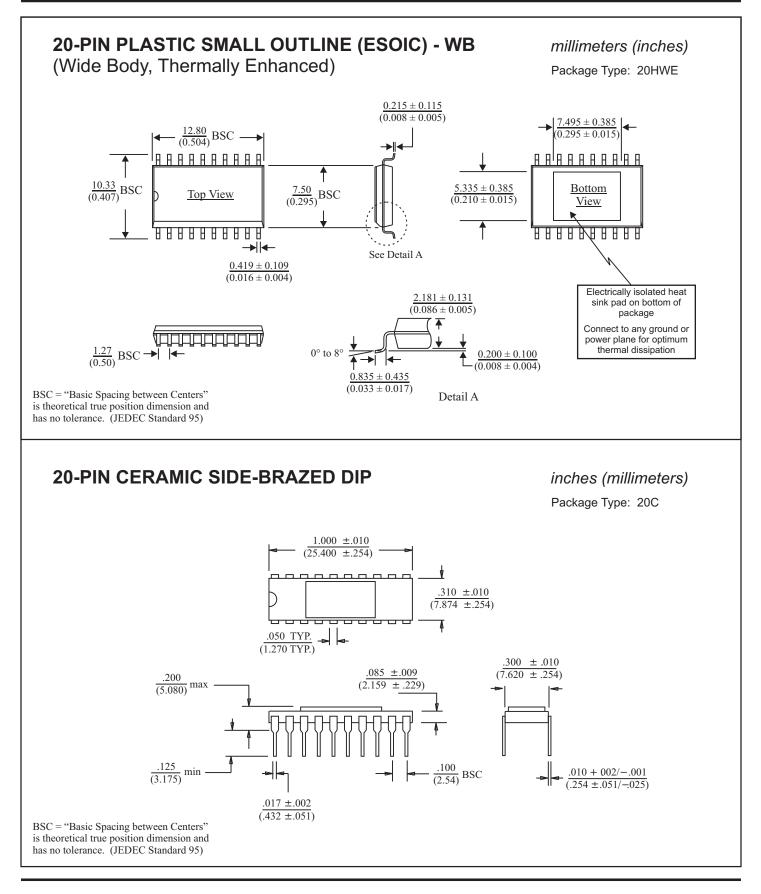

The HI-1579 and HI-1581 transceivers have been characterized for compliance with the electrical requirements of MIL-STD-1553 when used with the following

transformers. Holt recommends Premier Magnetics parts as offering the best combination of electrical performance, low cost and small footprint.

MANUFACTURER	PART NUMBER	APPLICATION	TURNS RATIO	DIMENSIONS
Premier Magnetics	PM-DB2791S	Isolation	Single 1:2.5	.400 x .400 x .185 inches
Premier Magnetics	PM-DB2756	Isolation	Dual 1:2.5	.930 x .575 x .185 inches
Premier Magnetics	PM-DB2702	Stub coupling	1:1.4	.625 x .625 x .250 inches

REVISION HISTORY

Document	Rev.	Date	Description of Change
DS1579	F	07/24/09	Correct typographical errors in package dimensions. Clarified available temperature ranges.
	G	10/5/09	Clarified status of RXA/B and $\overline{RXA}/\overline{B}$ pins in bus idle state when RXENA or RXENB are high (logic "1").
			Clarified nomenclature of chip-scale package as QFN. Added 'M' flow option for QFN package ('PCM' package option).
			Updated datasheet to include HI-1581 variant.
	Н	01/26/10	Corrected dynamic current and power dissipation values.
	Ι	02/01/10	Revised Thermal Characteristic table to correspond to correct dynamic currents and power dissipation values.
	J	08/18/10	Revised DC Electrical Characteristics table to correspond to actual measured values. Revised Bus Connection and Test Circuit Diagrams. Revised SOIC package standoff dimension.
	K	05/23/13	Revised text in functional description to improve clarity. Added more detail to AC timing parameter table. Removed reference to non-preferred transformers Updated package drawings.
	L	05/14/14	Correct typos in Figure references on pages 4 & 5. Update reflow solder temperature. Correct mistake in Figure 2. Update package drawings.
	Μ	04/09/15	Corrected Figures 2 and 3. Added notes for Receiver Gap Time in AC Characteristics. Other minor clarifications.
	Ν	01/13/16	Update Pin Descriptions for QFN package. Add Tape and Reel option for plastic packages.
	0	07/29/16	Update "DC Electrical Characteristics" table: change VIH to 2.0V min.
	Ρ	02/06/17	Remove Thermal Characteristics Table. See website for thermal resistance data. Correct minor typos.
	Q	06/06/17	Update Power Dissipation and Power Supply Current parameters.
	R	11/29/17	Correct typo in DC Electrical Characteristics Table; VoL incorrectly labeled as VIH.
