

## 3.3V Single-Rail ARINC 429 Differential Line Driver with Integrated DO-160G Level 3 Lightning Protection

### GENERAL DESCRIPTION

The HI-8597 is a 3.3V single supply ARINC 429 line driver with built-in lightning protection. The internal lightning protection circuitry allows compliance with RTCA/DO-160G, Section 22 Level 3 Pin Injection Test Waveform Set A (3 & 4), Set B (3 & 5A) and Set Z (3 & 5B) without the use of any external components, an industry first. Pin surge levels for Level 3 are summarized as follows:

Waveform 3	Waveform 4	Waveform 5A	Waveform 5B
Voc/Isc 600V/24A	Voc/Isc 300V/60A	Voc/Isc 300V/300A	Voc/Isc 300V/300A

An internal 37.5 Ohm resistor on each output enables direct connection to the ARINC 429 bus.

In addition, the device includes a dual polarity voltage doubler, allowing it to operate from a single +3.3V supply using only four external capacitors.

Other features include high-impedance outputs (tri-state) when both data inputs are taken high, allowing multiple line drivers to be connected to a common bus.

Bus pins feature built-in 8kV ESD input protection (HBM), with 6kV capability on all other pins. All logic inputs are 5V or 3.3V compatible.

The HI-8597 line driver is intended for use where logic signals must be converted to ARINC 429 levels such as when using an FPGA or the HI-3586 ARINC 429 protocol IC. The single supply operation and internal lightning protection circuitry enable huge board space saving, making HI-8597 the most compact, cost effective ARINC 429 line driver on the market today.

The part is available in Industrial -40°C to +85°C, or Extended, -55°C to +125°C temperature ranges. Optional burn-in is available on the extended temperature range.

### FEATURES

- Internal lightning protection circuitry allows compliance with RTCA/DO-160G, Section 22 Level 3 Pin Injection Test Waveform Set A (3 & 4), Set B (3 & 5A) and Set Z (3 & 5B).
- Operates from a single +3.3V supply
- Superb short circuit capability on ARINC 429 outputs (±50V for 1 second)
- All ARINC 429 voltage levels generated on-chip
- Digitally selectable rise and fall times
- Tri-state Outputs
- 37.5 Ohm output resistance allows direct connection to ARINC 429 bus
- Industrial and Extended temperature ranges
- Burn-in available

### PIN CONFIGURATION (TOP VIEW)

Table 1. Function Table

TX1IN	TX0IN	SLP	TXAOUT	TXBOUT	SLOPE
0	0	X	0V	0V	N/A
0	1	0	-5V	5V	10μs
0	1	1	-5V	5V	1.5μs
1	0	0	5V	-5V	10μs
1	0	1	5V	-5V	1.5μs
1	1	X	Hi-Z	Hi-Z	N/A

## PIN DESCRIPTIONS

Table 2. Pin Descriptions

Pin No.	Pin Name	Function	Description
1	NC	None	No connect.
2	GNDA	POWER	Ground connection of internal lightning protection circuitry for ARINC high output. MUST be tied to chip ground pin, GND.
3	TXAOUT	OUTPUT	ARINC high output with 37.5 Ohms series resistance
4	TXBOUT	OUTPUT	ARINC low output with 37.5 Ohms series resistance
5	GNDB	POWER	Ground connection of internal lightning protection circuitry for ARINC low output. MUST be tied to chip ground pin, GND.
6	SLP	INPUT	Output slew rate control. High selects ARINC 429 high-speed. Low selects ARINC 429 low-speed.
7	TX0IN	INPUT	Data input zero
8	TX1IN	INPUT	Data input one
9	V <sub>DD2+</sub>	OUTPUT	Voltage doubler positive output (~6.25V for 3.3V supply)
10	CP+	ANALOG	V <sub>DD2+</sub> flyback capacitor, C <sub>FLY</sub> ; positive terminal
11	CP-	ANALOG	V <sub>DD2+</sub> flyback capacitor, C <sub>FLY</sub> ; negative terminal
12	V <sub>DD</sub>	POWER	+3.3V power supply
13	GND	POWER	Ground supply
14	CN-	ANALOG	V <sub>DD2-</sub> flyback capacitor, C <sub>FLY</sub> ; negative terminal
15	CN+	ANALOG	V <sub>DD2-</sub> flyback capacitor, C <sub>FLY</sub> ; positive terminal
16	V <sub>DD2-</sub>	OUTPUT	Voltage doubler negative output (~ -6.1V for 3.3V supply)

## FUNCTIONAL DESCRIPTION

Figure 1 shows a block diagram of the line driver. The HI-8597 is internally lightning protected in compliance with RTCA/DO-160G, Section 22 Level 3 Pin Injection Test Waveform Set A (3 & 4), Set B (3 & 5A) and Set Z (3 & 5B). The waveforms are shown in Figure 5 through Figure 7. The device requires only a single +3.3V power supply. An integrated inverting / non-inverting voltage doubler generates the rail voltages ( $\pm 6.6V$ ) which are then used to produce the  $\pm 5V$  ARINC-429 output levels.

The internal dual polarity charge pump circuit requires four external capacitors, two for each polarity generated by the doubler. CP+ and CP- connect the external charge transfer or “fly” capacitor,  $C_{FLY}$ , to the positive portion of the doubler, resulting in twice  $V_{DD}$  at the  $V_{DD2+}$  pin. An output “hold” capacitor,  $C_{OUT+}$ , is placed between  $V_{DD2+}$  and GND.  $C_{OUT+}$  should be ten times the size of  $C_{FLY}$ . The inverting or negative portion of the converter works in a similar fashion, with  $C_{FLY}$  and  $C_{OUT-}$  placed between CN+ / CN- and  $V_{DD2-}$  / GND respectively.

Currents for slope control are set by on-chip resistors.

The TX0IN and TX1IN inputs receive logic signals from a control transmitter chip such as the HI-3584 or HI-3586. TXAOUT and TXBOUT hold each side of the ARINC bus

at Ground until one of the inputs becomes a One. If for example TX1IN goes high, a charging path is enabled to 5V on an “A” side internal capacitor while the “B” side is enabled to -5V. The charging current is selected by the SLP pin. If the SLP pin is high, the capacitor is nominally charged from 10% to 90% in 1.5 $\mu s$ . If SLP is low, the rise and fall times are 10 $\mu s$ .

A unity gain buffer receives the internally generated slopes and differentially drives the ARINC line. Current is limited by the series output resistors at each pin. There are no fuses at the outputs of the HI-8597.

The HI-8597 has 37.5 ohms in series with each TXOUT output, allowing direct connection to the ARINC 429 bus. The outputs are automatically lightning protected in compliance with RTCA/DO-160G, Section 22 Level 3 Pin Injection Test Waveform Set A (3 & 4), Set B (3 & 5A) and Set Z (3 & 5B) without any external components.

Tri-stateable outputs allow multiple line drivers to be connected to the same ARINC 429 bus. Setting TX1IN and TX0IN both to a logic “1” puts the outputs in the high-impedance state.

## ABSOLUTE MAXIMUM RATINGS

Supply Voltages	
$V_{DD}$ .....	+5V
Junction Temperature ( $T_{JMAX}$ ) .....	175°C
Solder Temperature (reflow) .....	260°C
Storage Temperature .....	-65°C to +150°C

RTCA/DO-160G, Section 22 pin injection	
Waveform	Voc/Isc
3	800V/32A
4	375V/75A
5A	375V/375A
5B	375V/375A

## RECOMMENDED OPERATING CONDITIONS

Supply Voltages	
$V_{DD}$ .....	+3.0V to +3.6V
Temperature Range	
Industrial Screening .....	-40°C to +85°C
Hi-Temp Screening .....	-55°C to +125°C

*NOTE: Stresses above absolute maximum ratings or outside recommended operating conditions may cause permanent damage to the device. These are stress ratings only. Operation at the limits is not recommended.*

# ELECTRICAL CHARACTERISTICS

Table 3. DC Electrical Characteristics

 $V_{DD} = +3.3V$ ,  $T_A$  = Operating Temperature Range (unless otherwise stated)

Parameters	Symbol	Test Conditions	Min	Typ	Max	Units
Input Voltage (TX1IN, TX0IN, SLP)						
High	$V_{IH}$		$0.7V_{DD}$	-	-	V
Low	$V_{IL}$		-	-	$0.3V_{DD}$	V
Input Current (TX1IN, TX0IN, SLP)						
Source	$I_{IH}$	$V_{IN} = 0V$	-	-	0.1	$\mu A$
Sink	$I_{IL}$	$V_{IN} = 3.3V$ , 7.34k $\Omega$ pulldown	-	45		$\mu A$
ARINC Output Voltage (Differential)						
one	$V_{DIFF1}$	no load; TXAOUT - TXBOUT	9	10	11	V
zero	$V_{DIFF0}$	no load; TXAOUT - TXBOUT	-11	-10	-9	V
null	$V_{DIFFN}$	no load; TXAOUT - TXBOUT	-0.5	0	0.5	V
ARINC Output Voltage (Ref. to GND)						
one or zero	$V_{DOUT}$	no load & magnitude at pin	4.5	5.0	5.5	V
null	$V_{NOUT}$	no load	-0.25	0	0.25	V
Operating Supply Current						
No load	$I_{DDNL}$	SLP = $V_{DD}$ TX1IN & TX0IN = 0V	-	28	40	mA
Max. Load	$I_{DDL}$	100kHz, 400 $\Omega$ load	-	65	-	mA
ARINC Outputs Shorted	$I_{DDST}$	See Note 1	-	165	-	mA
Power Dissipation in device <sup>2</sup>						
No load	$P_{DDNL}$	SLP = $V_{DD}$ TX1IN & TX0IN = 0V	-	93	132	mW
Max. Load (TXAOUT to TXBOUT)	$P_{DDLST}$	100kHz, 400 $\Omega$ load	-	215	-	mW
ARINC Outputs Shorted (TXOUT outputs)	$P_{DDST}$	See Note 1	-	545	-	mW
ARINC Output Impedance						
TXOUT pins	$Z_{OUT}$		35	37.5	40	Ohms
ARINC Output Tri-State Current	$I_{OZ}$	TX0IN = TX1IN = $V_{DD}$ , $T_A = 25^{\circ}C$ $-5.5V < V_{OUT} < +5.5V$	-200		200	$\mu A$
ARINC Output Tri-State Voltage	$V_{OZ}$	TX0IN = TX1IN = $V_{DD}$ , $T_A = 25^{\circ}C$ $-150\mu A < I_{OUT} < +150\mu A$	-5.5	-	+5.5	V

**Note 1:** TXAOUT and/or TXBOUT shorted to each other or ground.

**Note 2:** Estimate junction temperature using Theta JC or Theta JA values available on Holt's website, www.holtic.com.  $T_J \leq T_{JMAX}$

**Table 4. Converter Characteristics**
 $V_{DD} = +3.3V$ ,  $T_A$  = Operating Temperature Range (unless otherwise stated)

Parameters	Symbol	Test Conditions	Min	Typ	Max	Units
Start-up transient (V+, V-)	$t_{START}$		-	-	10	ms
Operating Switching Frequency	$f_{sw}$		-	650	-	kHz
Worst case maximum voltage doubler output	$V_{DD2+(max)}$	$V_{DD} = 3.6V$ . $T = -55^{\circ}C$ . Open load.			6.93	V
<b>DC/DC convertor capacitor recommendations.</b>						
<b>For optimum performance use typical (not min.) values. For EMC compliance, see AN-135.</b>						
Ratio of bulk storage to fly-back capacitors	$C_{OUT} / C_{FLY}$		2.2	10		
Fly-back capacitor (Recommend ceramic, preferably multilayer, dielectric XR7 caps, 10V min.).	$C_{FLY}$ $C_{FLY(ESR)}$	$C_{OUT} / C_{FLY} \geq 10$ [0.5, 1.0]Mhz	1.0	4.7	- 500	$\mu F$ m $\Omega$
Bulk storage capacitor (Recommend ceramic, preferably multilayer, dielectric XR7 caps, 10V min.).	$C_{OUT}$ $C_{OUT(ESR)}$	$C_{OUT} / C_{FLY} \geq 10$ [0.5, 1.0]Mhz	2.2	47	- 300	$\mu F$ m $\Omega$
By-pass capacitor (Recommend ceramic cap, 10V min.).	$C_{SUPPLY}$	$C_{SUPPLY} \geq C_{OUT}$ (connect from $V_{DD}$ to GND)				

**Table 5. AC Electrical Characteristics**
 $V_{DD} = +3.3V$ ,  $T_A$  = Operating Temperature Range (unless otherwise stated)

Parameters	Symbol	Test Conditions	Min	Typ	Max	Units
Line Driver Propagation Delay						
Output high to low	$t_{phlx}$	defined in Figure 2, no load	-	500	-	ns
Output low to high	$t_{plhx}$		-	500	-	ns
Line Driver Transition Times						
High Speed		SLP pin = Logic "1"				
Output high to low	$t_{fx}$		1.0	1.5	2.0	$\mu s$
Output low to high	$t_{rx}$		1.0	1.5	2.0	$\mu s$
Low Speed		SLP pin = Logic "0"				
Output high to low	$t_{fx}$		5.0	10.0	15.0	$\mu s$
Output low to high	$t_{rx}$		5.0	10.0	15.0	$\mu s$
Input Capacitance (Logic) <sup>1</sup>	$C_{IN}$		-	-	10	pF
Output Capacitance (Tri-state) <sup>1</sup>	$C_{OUT}$	$TX0IN = TX1IN = V_{DD}$	-	-	10	pF

## REVISION HISTORY

Revision	Date	Description of Change
DS8597, Rev. New	11/9/12	Initial Release
Rev. A	12/11/12	Clarify operating supply current for shorted ARINC outputs.
Rev. B	01/21/13	Change "VSS" pin label to "GND" and "-" to "NC" for clarification. Add pin numbers to Pin Description table. Rephrase "guarantees" compliance with DO-160G Level 3 to "allows" compliance with DO-160G Level 3. Update tri-state leakage parameter to 200μA. Add Absolute Maximum Ratings for lightning waveforms.
Rev. C	03/14/13	Remove erroneous references to AMPA and AMPB outputs in footnote on page 5.
Rev. D	05/08/13	Corrected state of SLP pin and erroneous reference to pin 1 in Test Conditions for Line Driver Transition Times (see AC Characteristics Table).
Rev. E	06/13/13	Update operating supply current.
Rev. F	07/19/13	Update operating supply current from 85mA to 100mA max.
Rev. G	10/02/14	Correct converter caps ESR values to be maximum instead of minimum. Update 16HWE package drawing.
Rev. H	12/09/14	Update Operating Supply Current and ARINC Output Impedance in "Table 3. DC Electrical Characteristics".
Rev. I	01/21/15	Delete Max. Power Dissipation in Absolute Maximum Ratings table. Add Max. Junction Temperature to table. Add Device Power Dissipation to DC Electrical Characteristics in Table 3. Recommend ceramic converter caps only (no tantalum) in "Converter Characteristics".
Rev. J	07/22/15	Clarify Load condition for Power Dissipation in DC Electrical Characteristics in Table 3.
Rev. K	02/21/17	Clarify ordering information. Only lead-free option offered in 16-pin WB SOIC.

# PACKAGE DIMENSIONS

## 16-PIN PLASTIC SMALL OUTLINE (ESOC) - WB (Wide Body, Thermally Enhanced)

millimeters (inches)

Package Type: 16HWE

Electrically isolated heat sink pad on bottom of package. Connect to any ground or power plane for optimum thermal dissipation.

BSC = "Basic Spacing between Centers"  
is theoretical true position dimension and  
has no tolerance. (JEDEC Standard 95)
