Intel® Modular Server

# Intel® Modular Server

## Built on Intel® Multi-Flex Technology

A simple, flexible system that provides exceptional value  
*Now with integrated Virtualization Management*

The Intel® Modular Server is a business-in-a-box server system with seamless installation, migration, and growth capabilities, integrating storage, computing, and networking to simplify complex IT environments.. It has the ability to support up to six Intel® Server Compute Modules, up to fourteen 2.5" SAS/SATA/SSD, as well as two Ethernet Switch Modules, integrated SAN, and a Management Module.

Additionally, the Intel Modular Server now delivers increased business value with the introduction of the Intel® Modular Server Virtualization Manager. Part of the Intel® Server Continuity Suite, the Intel Modular Server Virtualization Manager is integrated into the Modular Server's *single pane of glass* management interface making server virtualization and SAN setup and management incredibly simple.

# Intel® Modular Server

Features	Benefits
Scalable Server Compute Capacity	Supports up to six Intel® Xeon® dual processor-based Server Compute Modules.
Virtual, Integrated Shared Storage	Diskless Server Compute Modules utilize the integrated SAN, now offering the Intel® Shared LUN feature, with virtual drives to increase flexibility and maximize storage capacity. Purchase only what you need, when you need it.
Virtual Presence GUI Management	Manage your system as if you were standing right in front of it with the Virtual Presence GUI Management Interface.
Integrated Virtualization Management	Powerful suite of virtual machine management capabilities, including Live Migration, all with "single pane of glass" management for physical, virtual, and storage subsystems
Integrated Networking	Dual Gb Ethernet switches offer ten 1 GbE uplinks per module.
Full Redundancy & Hot Swap Capabilities	Hot-swappable Server Compute Modules and storage drives let you increase capacity on-demand. Redundant modules and hot spare options improve IT availability of the Intel Modular Server.

## Chassis

The chassis can be configured as either a 6U rack mount or as a horizontal pedestal base to provide flexibility in choosing the right setup for your business. It is designed to support multiple generations of Server Compute Modules, allowing swift upgrades to the latest computing technology.

## Storage Control Module

The Storage Control Module manages the Shared Storage Bay and connects to the Chassis Management Module. Features include:

- RAID 0, 1, 1E, 5, 6, 10, 50
- Expansion to connect an external SAS RAID array through a mini x4 external SAS port to allow sharing of external storage with all Server Compute Modules
- Optional second Storage Management Module for redundancy and performance
- Battery backup
- Global and dedicated hot spares

## Ethernet Switch Module

The Intel Modular Server can be configured with up to two Ethernet Switch Modules for redundancy. Each switch module features:

- Non-blocking wire-speed performance
- Ten external 10/100/1000 GbE full-duplex ports to provide enough performance to handle demanding applications
- Twelve internal 1 GbE full-duplex ports
- Layer 2+ features
- Switch configuration capabilities through the Management Module

## Management Module

The Management Module provides management capabilities for the entire system through a Virtual Presence GUI Management System. Virtual Presence GUI Interface features:

- Real time hardware information
- Context-sensitive actions

- Remote management
- Intuitive navigation with tabs and a navigation bar
- End-to-end management
- Direct device selection
- Web management via Microsoft® Internet Explorer® or Mozilla® Firefox®

## Mezzanine Card

The Server Compute Modules support an optional dual channel gigabit Ethernet Mezzanine Expansion Card.

## Software

Key-enabled software features that permit additional configuration and management functionality:

- Intel® Shared LUN – Provides additional storage capabilities that allow advanced clustering and virtualization applications
- Intel® Modular Server Storage Management Pack (formerly Intel® LUN Copier) – Enables local copies of any LUN when it is not being actively used. This feature simplifies tasks such as (a) creating a local copy of a data LUN and (b) creating a new OS LUN for provisioning/deployment
- Intel® Modular Server Advanced Management Pack – Offers enhanced management capabilities to allow users to more easily deploy multiple chassis. It enables authentication of users using an LDAP server, forwarding events to an external SysLog server, and exporting and importing chassis settings including the storage and switch configuration.

## Intel Modular Server Control lets you:

- Remote manage your server modules
- Power on/off
- Troubleshoot
- Remote KVM & CD
- Server Configuration
- Configure Shared Storage
  - Assign drives to storage pools
  - Create virtual drives
  - Assign virtual drives to multiple server modules using the Intel® Shared LUN feature
  - Make a copy of any existing LUN using the Intel® LUN Copier feature
- Designate global/hot spares
- Reassign storage pools or virtual drives

The Dashboard gives an overall system status view within the Modular Server Control

The Virtual Presence Modular Server Control allows you to see the components you physically have loaded in your system—even if they are powered down

The back view of the chassis allows you to see the status of your modules and power supplies

Easily virtualize compute modules and create virtual machines with Intel Modular Server Virtualization Manager

Create storage pools (either non-virtualized or virtualized) and virtual drives, and map virtual drives to multiple servers using the Intel Modular Server Virtualization Manager and Intel Shared LUN features

View a complete storage map from the virtual machine back to the hard drive

## NEW Integrated Virtualization Management:

Intel® Modular Server Virtualization Manager adds “single pane of glass” virtual management functionality, enabling you to:

- Virtualize a compute module with just a few clicks
- Easily create and move VMs from module to module with drag-and-drop live migration
- Update entire system in one click
- See a complete storage map from physical HDDs to virtual HDDs to virtual machines
- View a unified VM event and audit log
