

ITT Cannon KPT / KPSE Series MIL-DTL-26482 Series I Connectors

INTERMATEABLE WITH SOURIAU CONNECTORS & ALL MIL-DTL-26482 SERIES I

ITT Cannon KPT / KPSE series MIL-DTL-26482 series I connectors offer high-density contact arrangements in a miniature circular connector. The KPT series (thru-bulkhead) offers a range of solder cup connectors while the KPSE series offers crimp connectors. These series are qualified to MIL-DTL-26482 and are intermateable with VG95328 connectors, Souriau connectors and all MIL-26482 series I connectors. The ITT Cannon KPT / KPSE series is used in a range of harsh environment industrial applications. Mil spec prefixes include: MS3110, MS3112, MS3114, MS3116, MS3119, MS3120, MS3122, MS3124, and MS3126. ITT Cannon proprietary prefixes are KPT and KPSE. For full details on ITT Cannon KPT / KPSE series MIL-DTL-26482 series I connectors, please see the product specifications below.

APPLICATIONS

Military and Industrial environments requiring a miniature, high-density, environmental connector

- Power generators
- Engines
- Sensors
- Motion control
- Off-road vehicles
- Earth-moving equipment
- Ships
- Mobile equipment
- Industrial machinery
- Telecommunications

FEATURES

RUGGED SHELL

Aluminum alloy shell and hardware create a rugged connector with minimal weight. These connectors have been used extensively in commercial, military, and aerospace environments. Standard shells accept all MIL-DTL-26482 accessories.

ENVIRONMENTALLY-SEALED

Complete moisture sealing is achieved by combining four seals: shell, peripheral, interfacial, and wire. Wire seal is accomplished by multiple ripple design, exceeding the wire sealing requirements of MIL-DTL-26482.

RESISTANT TO MILITARY ENVIRONMENTS

These connectors will operate in temperatures from -67° to +257°F (-55° to +125°C) under the harshest possible conditions.

WIDE RANGE OF WIRE GAUGES AND CURRENT-CARRYING CAPABILITY

Up to 22 amps with wire gauges from size 24 up to size 16 AWG.

RESILIENT INSULATOR & GROMMET

A resilient polychloroprene insulator and integrated rear wire sealing grommet guarantees a liquid-tight assembly. Crimp contacts are available that can be inserted from the rear of the connector. Solder contacts are permanently bonded into the insulator.

SOLDER OR CRIMP GOLD-PLATED CONTACTS

Both solder (KPT) and crimp (KPSE) contacts are available. Both are gold-plated per MIL-G-45204 Type II. KPSE crimp contacts are designed to MIL-C-39029 and can be crimped with the standard M22520/1 crimp tool. Socket contacts are closed to eliminate damage from test probes and to help correct misaligned pins during engagement. Contact insertion is from the rear of the connector. When the contact is fully inserted, it snaps securely into metal retention tines embedded in the insulator. Contact extraction is accomplished from the front with the proper extraction tool. Pressing the tool plunger pushes the contact out through the rear of the connector.

AGENCY APPROVALS

- MIL-DTL-26482
- VG95328

MATERIALS & FINISHES

Shell	Aluminum Alloy
Plating	Olive drab chromate coating over cadmium plating, black zinc cobalt or electroless nickel
Contacts	Copper Alloy
Platings	Gold plate, 50 microinches minimum per MIL-G-45204 Type II
Insulator*	Resilient polychloroprene (Neoprene). KPSE insulators also encase a tough plastic wafer which contains metal contact retention tines for high reliability retention of crimp contacts.

*Optional zero halogen and high temperature insulators are available. Contact us for information.

ELECTRICAL DATA

Current Rating:

SERVICE RATING*	TEST ALTITUDE	MAXIMUM OPERATING VOLTAGE		TEST VOLTAGE	
		DC	AC	DC	AC (RMS)
I	SEA LEVEL	850	600	2,100	1,500
II		1,275	1,000	3,200	2,300
I	70,000 FEET	-	300	535	375
II		-	450	770	500

*Each insulator layout has a specific "Service Rating."

The Service Ratings for each layout are listed on [⇒ pages 183, 185 - 186](#).

Operating Voltage & Test Voltage:

CONTACT SIZE	RATED CURRENT AMPS	TEST CURRENT AMPS	POTENTIAL DROP (MILLIVOLTS) INITIAL
20	7.5	7.5	<55
16	22	13	<50

Wire Range Sizes 24 to 16 AWG

Contact Resistance When tested to MIL-STD-1344 Method 3004, will not exceed voltage drops listed in table. Consult MIL-DTL-26482, 3.6.4 for details.

Insulation Resistance 5,000 Megohms minimum at 77°F (25°C)

MECHANICAL

Operating Temperature -67°F to +257°F (-55°C to +125°C)

Sealing 48 hours in 6 feet of water per MIL-DTL-26482 4.6.14. Meets 10- and 20-day 50 to 95% humidity testing per MIL-STD-1344 Method 1002.2 per MIL-DTL-26482.

Wire Sealing Range

CONTACT SIZE	AWG WIRE	TEST CURRENT AMPS		
		MIN. (KPT)	MIN. (KPSE)	MAX. (KPT/KPSE)
20	24, 22, AND 20	.060 (1.52)	.047 (1.19)	.083 (2.11)
16	20, 18, AND 16	.066 (1.68)	.066 (1.68)	.109 (2.77)

All dimensions in inches (millimeters in parentheses) unless otherwise stated.

TECH SPECS

Insulation Strip Lengths:

CONTACT SIZE	WIRE SIZE (AWG)	STRIP LENGTH INCHES (MM)
20	20-24	.375 (9.5)
16	16-20	.250 (6.35)

Mating Life 500 cycles minimum

Salt Spray Unmated connectors and protective covers meet 48-hour exposure to MIL-STD-1344 Method 1001 per MIL-DTL-26482. (Cadmium Plating)

Heat +347°F (+175°C) for 1,000 hours to MIL-STD-1344 Method 1005.1 per MIL-DTL-26482

Chemical Resistance 20 hour full immersion unmated in hydraulic fluid and lubricating oil per MIL-DTL-26482

Vibration 10 to 2,000Hz (15g's) 10 microseconds maximum discontinuity. To MIL-STD-1344 Method 2005 per MIL-DTL-26482.

Shock 50g's, 11ms duration, three major axes. 10 microseconds maximum discontinuity. To MIL-STD-1344 Method 2004 per MIL-DTL-26482.

Contact Type Solder, crimp, printed circuit

Number of Circuits KPT: 2 to 61; KPSE: 3 to 61

Contact Insertion Insertion from the rear of connector with simple hand tool. Front release with appropriate extraction tool.

Contact Retention To MIL-STD-1344 Method 2007 per MIL-DTL-26482

CONTACT SIZE	AXIAL LOAD MIN. NEWTONS (LBS)
20	66.7 (15)
16	111.2 (25)

Polarization Five keyway, three-point bayonet with optional rotational polarization.
⇒ See page 183, 185.

* Add C for conductive type

** Select Plating

W = Olive drab over cadmium

A = Anodized

L = Electroless nickel

KPT SOLDER CONTACTS

STEP 1: Slide the rear accessories over the wire bundle in the proper sequence for re-assembly: cable clamp and/or endbell first, then ferrule and, if used, coupling nut.	STEP 2: Insert individual wires through the proper holes in the grommet.	STEP 3: Solder wires to appropriate contacts on the rear of the connector. ITT Cannon document: RPI234 covers standard soldering practices and is available upon request.	STEP 4: Fixture the connector for re-assembly using the endbell assembly tools or a mating connector with contacts installed.	STEP 5: Slide the grommet down the wires (lubricating the grommet with isopropyl alcohol will help).	STEP 6: Fill all unused grommet cavities with a wire hole filler to maintain the sealing integrity of the connector.	STEP 7: Slide coupling nut, ferrule, and endbell accessories over rear of the connector and tighten. Torque as follows: <table><tr><th>SHELL SIZE</th><th>GASKET</th></tr><tr><td>8, 10, 12, 14</td><td>10-15</td></tr><tr><td>16, 18</td><td>15-25</td></tr><tr><td>20, 22, 24</td><td>25-35</td></tr></table>	SHELL SIZE	GASKET	8, 10, 12, 14	10-15	16, 18	15-25	20, 22, 24	25-35
SHELL SIZE	GASKET													
8, 10, 12, 14	10-15													
16, 18	15-25													
20, 22, 24	25-35													

KPSE CRIMP TOOL OPERATION

STEP 1: Strip the wires to the appropriate length.

CONTACT SIZE	STRIP LENGTH
20	1/4" (6.4MM)
16	1/4" (6.4MM)

STEP 2: Open the AF8 (M22520/1-01) crimp tool by squeezing the handles. Push the latch on TH1A (M22520/1-02) to pop up the locator on the turret. Attach the turret to the AF8 crimp tool using the two captive hex bolts in the turret.

STEP 3: Select the proper locator position for your contact by rotating the locator until the proper color is aligned with the index mark. Push locator back down until it snaps into position.

CONTACT SIZE	LOCATOR COLOR
20	RED
16	BLUE

STEP 4: Adjust dial for proper wire gauge. To change the dial setting, remove the lock pin and lift center of dial. Turn to the desired wire gauge. Replace lock pin on dial.

STEP 5: Cycle the tool before inserting the contact to be sure the tool is in the open position. Drop the contact, mating end first, into the crimp cavity of the tool. Squeeze the tool handle just enough to grip the contact without actually crimping it.

STEP 6: Insert the stripped wire into the contact with a slight twisting motion. Be sure all wire strands are inside the contact. Squeeze the handle to cycle the tool. The handle will not release until the contact is completely crimped.

STEP 7: Remove the crimped contact. Pull on the wire slightly to be sure it is properly crimped. Be sure the contact is not bent or damaged in any way. Visually inspect the crimp:

INSERTION OF CONTACTS

STEP 1:

Slide the rear accessories over the wire bundle in the proper sequence for re-assembly: cable clamp and/or endbell first, then ferrule, and coupling nut.

STEP 2:

Using the proper insertion tool, slide the tool over the wire side of the contact until the tool bottoms on the contact.

The tool for size 16 contacts pushes against the shoulder of the contact. The rear, or insulation support, of the size 20 contacts presses against an internal shoulder in the tool tip.

STEP 3:

Dip the contact and tool tip in isopropyl alcohol (do not use any lubricant other than isopropyl alcohol). Hold the tool perpendicular to the rear of the connector. Beginning with the center cavity and working outward in a circular pattern, insert the wired contact into the rear of the connector until the contact snaps into place. A light pull on the wire will assure that the contact is locked securely.

**STEP 4:**

Fill any unused cavities with contacts. A wire hole filler must be inserted into the grommet behind the unused contacts to maintain the sealing integrity of the connector. Trim off excess.

STEP 5:

Check the mating face of the connector to ensure that all the same size contacts are on the same plane (fully inserted). If not, the contact is not fully inserted. Remove the contact using the proper extraction tool and procedure and reinsert. Do not attempt to reinsert the insertion tool to correct the problem.

The tool for size 16 contacts presses against the shoulder of the contact. The rear, or insulation support, of the size 20 contacts presses against an internal shoulder in the tool tip.

STEP 6:

Fixture the connector for re-assembly using the endbell assembly tools or a mating connector with contacts installed. Slide the connector accessories back down the cable over the rear of the connector and tighten. Torque as follows:

SIZE	TORQUE (INCH/LBS)
8, 10, 12, 14	10-15
16, 18	15-25
20, 22, 24	25-35

EXTRACTION OF CONTACTS

STEP 1:

Remove the endbell accessories and slide them back over the wires.

STEP 2:

Use the proper extraction tool.

STEP 3:

On the mating face of the connector, insert the tool over the contact and into the insulator until the tool bottoms. While keeping an even pressure against the tool, push the plunger on the tool shaft forward with your thumb and index finger. This will release the contact from the retention tine and push it toward the rear of the connector.

STEP 4:

Carefully remove extraction tool from the connector. Pull the wire by hand to completely remove the contact from the rear of the connector.
