Jameco Part Number 2034360

### FEATURES

- Automatically restarts a microprocessor after power failure
- Maintains reset for 150ms after  $V_{CC}$  returns to an in-tolerance condition
- Reduces need for discrete components
- Precision temperature-compensated voltage reference and voltage sensor
- Accurate 5%, 10% or 20% power monitoring
- Low-cost TO-92 or space saving surface-mount SOT-23 packages available
- Push-pull output for low current operation
- Operating temperature  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$

### DESCRIPTION

The DS1815 EconoReset uses a precision temperature reference and comparator circuit to monitor the status of the power supply ( $V_{CC}$ ). When an out-of-tolerance condition is detected, an internal power-fail signal is generated which forces reset to the active state. When  $V_{CC}$  returns to an in-tolerance condition, the reset signal is kept in the active state for approximately 150ms to allow the power supply and processor to stabilize.

## OPERATION — POWER MONITOR

The DS1815 provides the functions of detecting out-of-tolerance power supply conditions and warning a processor-based system of impending power failure. When  $V_{CC}$  is detected as out of tolerance, the  $\overline{RST}$  signal is asserted. On power-up,  $\overline{RST}$  is kept active for approximately 150ms after the power supply has reached the selected tolerance. This allows the power supply and microprocessor to stabilize before  $\overline{RST}$  is released.

**NOTES:**

1. All voltages are referenced to ground.
2. Measured with  $V_{CC} \geq 2.7V$ .
3. Measured with  $\overline{RST}$  output open.
4. Measured with  $2.7V \leq V_{CC} \leq 3.3V$ .
5.  $t_R = 5\mu s$ .
6. The  $t_F$  value is for reference in defining values for  $T_{RPD}$  and should not be considered a requirement for proper operation or use of the device.
