

- 375W AC-DC
- 3.3" x 5" footprint
- Up to 93% efficiency
- High power density: Over 15W/cu in.
- All outputs may be paralleled
- Remote on/off
- 5V Standby output (1amp)
- 12V Aux output (1amp)
- Universal AC input
- Active PFC (90 – 264 VAC)
- Active current sharing for N, N+1 (main output)*
- Active inrush current protection
- Convection cooling
- RoHS compliant
- OR-ing MOSFET board (optional)

Power Supply Design Leader

N2Power™ leads the power density race with its high efficiency XL375 Series AC-DC power supplies. Our advanced technology yields a very small footprint, reduces wasted power and offers the highest power density in its class. This efficient design means reduced energy costs, a greater return on your investment, greater reliability and longer product life.

Unmatched Power Density

With an overall height of 1.5" and a 3.3" x 5" footprint, the XL375 Series boasts a power density over 15 watts per cubic inch. It is ideally suited for OEMs using the industry standard 1U chassis.

High Efficiency in a Small Package

The XL375 Series provides up to 93% efficiency. Our unique design reduces energy consumption and generates less wasted heat.

It requires little forced air cooling, decreases AC power consumption, increases reliability and economy of operation. You can use the XL375 Series in convection operations up to 260watts (w/o fans). Comparisons of efficiencies show that our supplies can reduce losses up to 50%.

Complete Protection

The main output is enabled whenever all of the required startup conditions are met, and is shut down upon command, loss of input power or whenever excessive loads or temperatures are sensed. It always provides the host system with advanced warning of an impending shutdown to enable it to perform housekeeping before power is lost. The OR-ing board option allows the main outputs of up to four XL375s to be operated in parallel. It also provides hot-swappable N+1 configurations.
