## **74ALVC244**

### Octal buffer/line driver; 3-state

Preliminary specification  
File under Integrated Circuits, IC24

2001 Oct 30

## Octal buffer/line driver; 3-state

## 74ALVC244

## FEATURES

- Wide supply voltage range of 1.65 to 3.6 V
- Complies with JEDEC standard:
  - JESD8-7 (1.65 to 1.95 V)
  - JESD8-5 (2.3 to 2.7 V)
  - JESD8B/JESD36 (2.7 to 3.6 V).
- 3.6 V tolerant inputs/outputs
- CMOS LOW power consumption
- Direct interface with TTL levels (2.7 to 3.6 V)
- Power-down mode
- Latch-up performance exceeds  $\leq 250$  mA
- ESD protection:
  - Human Body Model (HBM) (A 114-A) exceeds 2000 V
  - Machine Model (MM) (A 115-A) exceeds 200 V.

## DESCRIPTION

The 74ALVC244 is a high-performance, low-power, low-voltage, Si-gate CMOS device and superior to most advanced CMOS compatible TTL families.

The 74ALVC244 is an octal non-inverting buffer/line driver with 3-state outputs. The 3-state outputs are controlled by the output enable inputs  $1\overline{OE}$  and  $2\overline{OE}$ . A HIGH on  $n\overline{OE}$  causes the outputs to assume a HIGH impedance OFF-state. Schmitt-trigger action at all inputs makes the circuit highly tolerant for slower input rise and fall times.

## QUICK REFERENCE DATA

GND = 0 V;  $T_{amb} = 25^\circ\text{C}$ .

| SYMBOL            | PARAMETER                                        | CONDITIONS                                                           | TYPICAL | UNIT |
|-------------------|--------------------------------------------------|----------------------------------------------------------------------|---------|------|
| $t_{PHL}/t_{PLH}$ | propagation delay inputs $nA_n$ to output $nY_n$ | $V_{CC} = 1.8\text{ V}; C_L = 30\text{ pF}; R_L = 1\text{ k}\Omega$  | –       | ns   |
|                   |                                                  | $V_{CC} = 2.5\text{ V}; C_L = 30\text{ pF}; R_L = 500\text{ }\Omega$ | –       | ns   |
|                   |                                                  | $V_{CC} = 2.7\text{ V}; C_L = 50\text{ pF}; R_L = 500\text{ }\Omega$ | –       | ns   |
|                   |                                                  | $V_{CC} = 3.3\text{ V}; C_L = 50\text{ pF}; R_L = 500\text{ }\Omega$ | –       | ns   |
| $C_I$             | input capacitance                                |                                                                      | 3.5     | pF   |
| $C_{PD}$          | power dissipation capacitance per buffer         | $V_{CC} = 3.3\text{ V}$ ; notes 1 and 2                              | 20      | pF   |

## Notes

1.  $C_{PD}$  is used to determine the dynamic power dissipation ( $P_D$  in  $\mu\text{W}$ ).

$$P_D = C_{PD} \times V_{CC}^2 \times f_i + (C_L \times V_{CC}^2 \times f_o) \text{ where:}$$

$f_i$  = input frequency in MHz;

$f_o$  = output frequency in MHz;

$C_L$  = output load capacitance in pF;

$V_{CC}$  = supply voltage in Volts.

2. The condition is  $V_i = \text{GND to } V_{CC}$ .

## FUNCTION TABLE

See note 1.

| INPUT            |        | OUTPUT |
|------------------|--------|--------|
| $\overline{nOE}$ | $nA_n$ | $nY_n$ |
| L                | L      | L      |
| L                | H      | H      |
| H                | X      | Z      |

## Note

1. H = HIGH voltage level;  
L = LOW voltage level;  
X = don't care;  
Z = HIGH-impedance OFF-state.

## ORDERING INFORMATION

| TYPE NUMBER | PACKAGES |         |          |          |
|-------------|----------|---------|----------|----------|
|             | PINS     | PACKAGE | MATERIAL | CODE     |
| 74ALVC244D  | 20       | SO      | plastic  | SOT163-1 |
| 74ALVC244PW | 20       | TSSOP   | plastic  | SOT360-1 |

## PINNING

| PIN               | SYMBOL           | DESCRIPTION                      |
|-------------------|------------------|----------------------------------|
| 1                 | $1\overline{OE}$ | output enable input (active LOW) |
| 2, 4, 6 and 8     | $1A_0$ to $1A_3$ | data inputs                      |
| 3, 5, 7 and 9     | $2Y_0$ to $2Y_3$ | bus outputs                      |
| 10                | GND              | ground (0 V)                     |
| 11, 13, 15 and 17 | $2A_3$ to $2A_0$ | data inputs                      |
| 12, 14, 16 and 18 | $1Y_3$ to $1Y_0$ | bus outputs                      |
| 19                | $2\overline{OE}$ | output enable input (active LOW) |
| 20                | $V_{CC}$         | supply voltage                   |

|                   | SO package                    | above 70 °C derate linearly with 8 mW/K   | –    | 500            | mW   |
|                   | TSSOP package                 | above 60 °C derate linearly with 5.5 mW/K | –    | 500            | mW   |

## Notes

1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
2. When  $V_{CC} = 0$  V (Power-down mode), the output voltage can be 3.6 V in normal operation.

## Notes

1. All typical values are measured at V<sub>CC</sub> = 3.3 V and T<sub>amb</sub> = 25 °C.
2. For transceivers, the parameters I<sub>OZ</sub> includes the input leakage current.

### SOLDERING

#### Introduction to soldering surface mount packages

This text gives a very brief insight to a complex technology. A more in-depth account of soldering ICs can be found in our *"Data Handbook IC26; Integrated Circuit Packages"* (document order number 9398 652 90011).

There is no soldering method that is ideal for all surface mount IC packages. Wave soldering can still be used for certain surface mount ICs, but it is not suitable for fine pitch SMDs. In these situations reflow soldering is recommended.

#### Reflow soldering

Reflow soldering requires solder paste (a suspension of fine solder particles, flux and binding agent) to be applied to the printed-circuit board by screen printing, stencilling or pressure-syringe dispensing before package placement.

Several methods exist for reflowing; for example, convection or convection/infrared heating in a conveyor type oven. Throughput times (preheating, soldering and cooling) vary between 100 and 200 seconds depending on heating method.

Typical reflow peak temperatures range from 215 to 250 °C. The top-surface temperature of the packages should preferably be kept below 220 °C for thick/large packages, and below 235 °C for small/thin packages.

#### Wave soldering

Conventional single wave soldering is not recommended for surface mount devices (SMDs) or printed-circuit boards with a high component density, as solder bridging and non-wetting can present major problems.

To overcome these problems the double-wave soldering method was specifically developed.

If wave soldering is used the following conditions must be observed for optimal results:

- Use a double-wave soldering method comprising a turbulent wave with high upward pressure followed by a smooth laminar wave.
- For packages with leads on two sides and a pitch (e):
  - larger than or equal to 1.27 mm, the footprint longitudinal axis is **preferred** to be parallel to the transport direction of the printed-circuit board;
  - smaller than 1.27 mm, the footprint longitudinal axis **must** be parallel to the transport direction of the printed-circuit board.

The footprint must incorporate solder thieves at the downstream end.

- For packages with leads on four sides, the footprint must be placed at a 45° angle to the transport direction of the printed-circuit board. The footprint must incorporate solder thieves downstream and at the side corners.

During placement and before soldering, the package must be fixed with a droplet of adhesive. The adhesive can be applied by screen printing, pin transfer or syringe dispensing. The package can be soldered after the adhesive is cured.

Typical dwell time is 4 seconds at 250 °C.

A mildly-activated flux will eliminate the need for removal of corrosive residues in most applications.

#### Manual soldering

Fix the component by first soldering two diagonally-opposite end leads. Use a low voltage (24 V or less) soldering iron applied to the flat part of the lead. Contact time must be limited to 10 seconds at up to 300 °C.

When using a dedicated tool, all other leads can be soldered in one operation within 2 to 5 seconds between 270 and 320 °C.

## Suitability of surface mount IC packages for wave and reflow soldering methods

| PACKAGE                                      | SOLDERING METHOD                  |                       |
|----------------------------------------------|-----------------------------------|-----------------------|
|                                              | WAVE                              | REFLOW <sup>(1)</sup> |
| BGA, LFBGA, SQFP, TFBGA                      | not suitable                      | suitable              |
| HBCC, HLQFP, HSQFP, HSOP, HTQFP, HTSSOP, SMS | not suitable <sup>(2)</sup>       | suitable              |
| PLCC <sup>(3)</sup> , SO, SOJ                | suitable                          | suitable              |
| LQFP, QFP, TQFP                              | not recommended <sup>(3)(4)</sup> | suitable              |
| SSOP, TSSOP, VSO                             | not recommended <sup>(5)</sup>    | suitable              |

## Notes

1. All surface mount (SMD) packages are moisture sensitive. Depending upon the moisture content, the maximum temperature (with respect to time) and body size of the package, there is a risk that internal or external package cracks may occur due to vaporization of the moisture in them (the so called popcorn effect). For details, refer to the Drypack information in the *"Data Handbook IC26; Integrated Circuit Packages; Section: Packing Methods"*.
2. These packages are not suitable for wave soldering as a solder joint between the printed-circuit board and heatsink (at bottom version) can not be achieved, and as solder may stick to the heatsink (on top version).
3. If wave soldering is considered, then the package must be placed at a 45° angle to the solder wave direction. The package footprint must incorporate solder thieves downstream and at the side corners.
4. Wave soldering is only suitable for LQFP, TQFP and QFP packages with a pitch (e) equal to or larger than 0.8 mm; it is definitely not suitable for packages with a pitch (e) equal to or smaller than 0.65 mm.
5. Wave soldering is only suitable for SSOP and TSSOP packages with a pitch (e) equal to or larger than 0.65 mm; it is definitely not suitable for packages with a pitch (e) equal to or smaller than 0.5 mm.

## Notes

1. Please consult the most recently issued data sheet before initiating or completing a design.
2. The product status of the device(s) described in this data sheet may have changed since this data sheet was published. The latest information is available on the Internet at URL <http://www.semiconductors.philips.com>.

## DEFINITIONS

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

**Limiting values definition** — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## DISCLAIMERS

**Life support applications** — These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

**Right to make changes** — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no licence or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
