FAN7393A Half-Bridge Gate Drive IC

Features

- Floating Channel for Bootstrap Operation to +600V
- Typically 2.5A/2.5A Sourcing/Sinking Current Driving Capability
- Extended Allowable Negative V_S Swing to -9.8V for Signal Propagation at $V_{BS}=15V$
- High-Side Output in Phase of IN Input Signal
- 3.3V and 5V Input Logic Compatible
- Matched Propagation Delay for Both Channels
- Built-in Shutdown Function
- Built-in UVLO Functions for Both Channels
- Built-in Common-Mode dv/dt Noise Cancelling Circuit
- Internal 400ns Minimum Dead Time at $R_{DT}=0\Omega$
- Programmable Turn-On Delay Control (Dead-Time)

Applications

- High-Speed Power MOSFET and IGBT Gate Driver
- Induction Heating
- High-Power DC-DC Converter
- Synchronous Step-Down Converter
- Motor Drive Inverter

Description

The FAN7393A is a half-bridge gate-drive IC with shut-down and programmable dead-time control functions that can drive high-speed MOSFETs and Isolated Gate Bridge Transistors (IGBTs) operating up to +600V. It has a buffered output stage with all NMOS transistors designed for high-pulse-current driving capability and minimum cross-conduction.

Fairchild's high-voltage process and common-mode noise canceling techniques provide stable operation of the high-side driver under high dv/dt noise circumstances. An advanced level-shift circuit offers high-side gate driver operation up to $V_S=-9.8V$ (typical) for $V_{BS}=15V$.

The UVLO circuit prevents malfunction when V_{DD} and V_{BS} are lower than the specified threshold voltage.

The high-current and low-output voltage drop feature makes this device suitable for diverse half- and full-bridge inverters; motor drive inverters, switching mode power supplies, induction heating, and high-power DC-DC converter applications.

Pin Definitions

Pin #	Name	Description
1	IN	Logic Input for High-Side and Low-Side Gate Driver Output, In-Phase with HO
2	$\overline{\text{SD}}$	Logic Input for Shutdown
3	V_{SS}	Logic Ground
4	DT	Dead-Time Control with External Resistor (Referenced to V_{SS})
5	COM	Ground
6	LO	Low-Side Driver Return
7	V_{DD}	Supply Voltage
8	NC	No Connection
9	NC	No Connection
10	NC	No Connection
11	V_S	High-Voltage Floating Supply Return
12	HO	High-Side Driver Output
13	V_B	High-Side Floating Supply
14	NC	No Connection

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only. $T_A=25^{\circ}\text{C}$ unless otherwise specified.

Notes:

1. This IC contains a shunt regulator on V_{BS} . This supply pin should not be driven by a low-impedance voltage source greater than V_{SHUNT} specified in the Electrical Characteristics section.
2. Mounted on 76.2 x 114.3 x 1.6mm PCB (FR-4 glass epoxy material).
3. Refer to the following standards:
JESD51-2: Integral circuits thermal test method environmental conditions - natural convection, and
JESD51-3: Low effective thermal conductivity test board for leaded surface mount packages.
4. Do not exceed maximum P_D under any circumstances.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

Symbol	Parameter	Min.	Max.	Unit
