Description

Low cost, low profile, 500mW SMD isolated DC/DC single output converter ideal for applications such as communication, current sensing, and medical applications which require robust isolation. The R05CT05S is a single solution with 5V input and a user-definable single, regulated 3.3V or 5V output. There is no minimum load requirement. Standard isolation is 5kVAC/1min with a 2MOPP rating for medical applications. The operating temperature is from -40°C up to +140°C with derating.

SYNC FUNCTION

Parameter	Condition	Min.	Typ.	Max.
SYNC Pin Input Current	SYNC Voltage= 5VDC		0.02µA	1µA
SYNC OK Output Voltage	I SYNC_OK= -2mA		150mV	
SYNC OK pin leakage current	V SYNC_OK= 5VDC			1µA

Synchronous clock input pin. Provide a clock signal to synchronize multiple RxxCTxxS devices or connect to -V_{IN} for standalone operation using the internal oscillator. If the SYNC pin is left open it should be separated from any switching noise to avoid false clock coupling.

Active-low, open-drain diagnostic output. Pin is asserted LOW if an no external SYNC clock or one that is outside of the operating range of the RxxCTxxS is detected. In this state, the external clock is ignored and the DC-DC converter is clocked by the device's internal oscillator. The pin is in high-impedance if a good clock is applied on SYNC.
