

# PolySwitch Radial-leaded

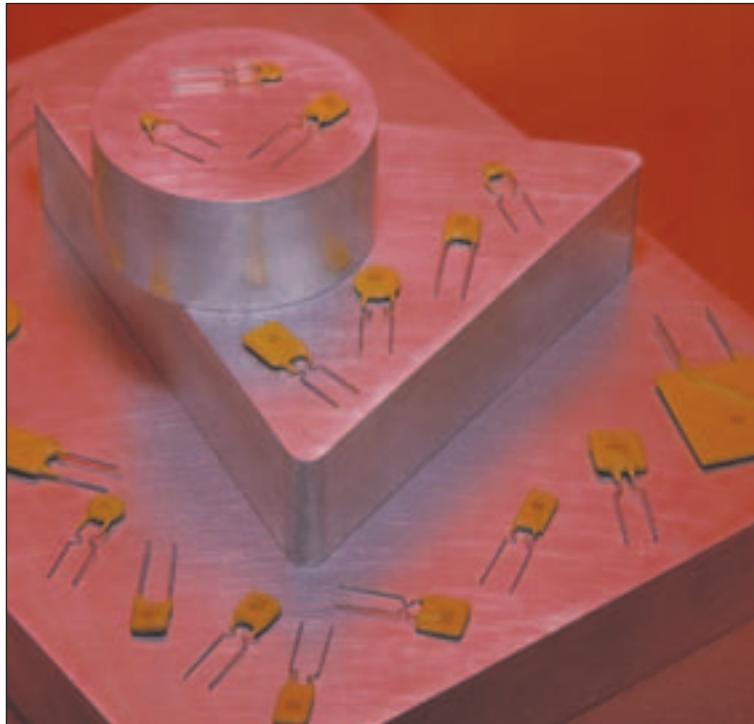

## Resettable Devices

Raychem Circuit Protection has pioneered PPTC technology for over twenty years. Our radial-leaded products represent the widest range of product capabilities.

- RGE series for hold currents up to 14A
- RHE series for flatter thermal derating and operating temperatures up to 125°C
- RUE series for balance of voltage rating (30V) and hold current (up to 9A)
- RUSB series for fast time-to-trip and low-resistance computer applications
- RTE series specifically designed for IEEE-1394 applications
- RXE series for low hold currents (down to 50mA) and high voltage rating (up to 72V)
- LVR series for line voltage applications up to a continuous operating voltage of 265V<sub>AC</sub>
- TR600 series for North America telephone applications
- TR250 series for ITU telephone applications
- BBR series for cable telephone applications
- Now offering Pb-free versions of all products. For Pb-free versions of R-line products simply add an "F" to the end of the series description.

Whether for design or volume application, our radial-leaded products represent the most comprehensive and complete set of PPTC products available in the industry today.

**Devices in this section are grouped by:**  
**Voltage Rating, Device Series, Hold Current**

### Benefits:

- Many product choices give engineers more design flexibility
- Compatible with high-volume electronics assembly
- Assists in meeting regulatory requirements
- Higher voltage ratings allow use in new applications

### Features:

- Broadest range of radial-leaded resettable devices available in the industry
- Current ratings from 50mA to 15A
- Voltage ratings from 6V (computer and electronic applications) to 265V<sub>AC</sub> line voltage applications

- Agency recognition: UL, CSA, TÜV
- Fast time-to-trip
- Low resistance

### Applications:

- Satellite video receivers
- Industrial controls
- Transformers
- Computer motherboards
- Modems
- USB hub, ports and peripherals
- IEEE1394 ports
- CD-ROMs
- Game machines
- Battery packs
- Phones
- Fax machines
- Analog and digital line cards
- Printers

**Step 1. Determine the circuit's operating parameters.**

Fill in the following information about the circuit:

Maximum ambient operating temperature \_\_\_\_\_

Normal operating current \_\_\_\_\_

Maximum operating voltage  
(i.e., RUE135 is 30V max.) \_\_\_\_\_

Maximum interrupt current \_\_\_\_\_

**Step 2. Select the PolySwitch device that will accommodate the circuit's maximum ambient temperature and normal operating current.**

Look across the top of Table R2 to find the temperature that most closely matches the circuit's maximum operating temperature. Look down that column to find the value equal to or greater than the circuit's normal operating current. Now look to the far left of that row to find the part number for the PolySwitch device that will best accommodate the circuit. Devices in this section are grouped by voltage rating; therefore, your operating current requirement may be found in more than one product grouping.

The thermal derating curves located in Figures R1–R5 are the normalized representations of the data in Table R2.

**Step 3. Compare the maximum electrical ratings of the selected device with the maximum operating voltage and maximum interrupt currents of the circuit.**

Look down the first column of Table R3 to find the part number you selected in Step 2. Look to the right in that row to find the device's maximum operating voltage ( $V_{MAX}$ ) and maximum interrupt current ( $I_{MAX}$ ). Ensure that  $V_{MAX}$  and  $I_{MAX}$  are greater than or equal to operating voltage and maximum interrupt current.

**Step 4. Determine time-to-trip.**

Time-to-trip is the amount of time it takes for a device to switch to a high-resistance state once a fault current has been applied across the device. Identifying the PolySwitch device's time-to-trip is important in order to provide the desired protection capabilities. If the device you choose trips too fast, undesired or nuisance tripping will occur. If the device trips too slowly, the components being protected may be damaged before the device switches to a high-resistance state.

Refer to the typical time-to-trip curves for each of the PolySwitch devices found in Figures R17–R23.

If the time-to-trip of the PolySwitch device is too fast or too slow for the circuit, go back to Step 2 and choose an alternate device.

**Step 5. Verify ambient operating conditions.**

Ensure that your application's minimum and maximum ambient temperatures are within the operating temperature of -40°C to 85°C (-40 to 125°C for RHE device series).

**Step 6. Verify the PolySwitch device dimensions.**

Using the dimensions in Table R4, compare the dimensions of the PolySwitch device you selected with the application's space considerations.

## Protection Application Selection Guide for Radial-leaded Devices

The guide below lists PolySwitch devices that are typically used in these applications.

Specifications for the suggested device part numbers can be found in this section.

Once a part number has been selected, the user should evaluate and test each product for its intended application.

PolySwitch Resettable Devices—Key Selection Criteria

Soldering characteristics	Solderability per ANSI/J-STD-002 Category 3
Solder heat withstand	per IEC-STD 68-2-20, Test Tb, Method 1a, condition b; can withstand 10 seconds at 260°C ± 5°C
Insulating material	Cured, flame-retardant epoxy polymer; meets UL 94V-0

**RTEF****Physical Characteristics**

Lead material	Tin-plated copper-clad steel, 0.205mm <sup>2</sup> (24 AWG), ø 0.40mm (0.016 in.)
Soldering characteristics	Solderability per ANSI/J-STD-002 Category 3
Solder heat withstand	per IEC-STD 68-2-20, Test Tb, Method 1a, condition b; can withstand 10 seconds at 260°C ± 5°C
Insulating material	Cured, flame-retardant epoxy polymer; meets UL 94V-0

**RTE/RTEF****Environmental Specifications**

**Latest Information**

- Please visit us at [www.circuitprotection.com](http://www.circuitprotection.com) or contact your local representative for the latest information.
- The information in this Databook contains some preliminary information. Raychem Circuit Protection, a division of Tyco Electronics, reserves the right to change any of the specifications without notice. In addition, Tyco Electronics reserves the right to make changes—without notification to Buyer—to materials or processing that do not affect compliance with any applicable specification.

**WARNING:**

- Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- The devices are intended for protection against occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Contamination of the PPTC material with certain silicon based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
- Operation in circuits with a large inductance can generate a circuit voltage ( $L \frac{di}{dt}$ ) above the rated voltage of the PolySwitch resettable device.
