

REVISIONS																								
LTR	DESCRIPTION										DATE (YR-MO-DA)				APPROVED									
A	Add case outline U. Add vendor cage 18325. Add programming method B. Changes 4.3.1c and 4.3.1e. Editorial changes throughout.										89-03-01				W. Heckman									
B	Add device type 02, editorial changes throughout. Add test circuit to figure 3. Add vendor CAGE 34649 for case outline U.										90-03-09				W. Heckman									
C	Add symbols, definitions, and functional descriptions. Convert to one part - one part number format.										91-02-14				W. Heckman									
D	Changes in accordance with NOR 5962-R231-92.										92-07-16				M. Poelking									
E	Add device types 03 - 06. Add case outlines X, Y. Editorial changes throughout.										96-01-02				M. Poelking									
F	Add paragraph 6.7 PIN supersession information. Update boilerplate to MIL-PRF-38535 requirements. - LTG										04-09-03				Thomas M. Hess									
G	Add device types 07 and 08. Update boilerplate to current MIL-PRF-38535 requirements. - CFS										07-02-09				Thomas M. Hess									
H	Add QD device criteria to paragraphs 3.1 and 3.5.1. - CFS										07-09-04				Thomas M. Hess

											SHEET 1 OF 29													

1. SCOPE

1.1 Scope. This drawing documents three product assurance class levels consisting of space application (device class V), high reliability (device classes M and Q), and nontraditional performance environment (device class N). A choice of case outlines and lead finishes are available and are reflected in the Part or Identifying Number (PIN). When available, a choice of Radiation Hardness Assurance (RHA) levels are reflected in the PIN. For device class N, the user is cautioned to assure that the device is appropriate for the application environment.

1.2 PIN. The PIN is as shown in the following example:

1.2.1 RHA designator. Device classes N, Q, and V RHA marked devices meet the MIL-PRF-38535 specified RHA levels and are marked with the appropriate RHA designator. Device class M RHA marked devices meet the MIL-PRF-38535, appendix A specified RHA levels and are marked with the appropriate RHA designator. A dash (-) indicates a non-RHA device.

1.2.2 Device type(s). The device type(s) identify the circuit function as follows:

Device type	Generic number	Circuit function	Temperature range
01	87C51	8-bit microcontroller with 4k-bytes EPROM memory. (3.5 to 12MHz)	-55°C to 125°C
02	87C51-16	8-bit microcontroller with 4k-bytes EPROM memory. (3.5 to 16MHz)	-55°C to 125°C
03	87C51	8-bit microcontroller with one time programmable memory. (3.5 to 12MHz)	-40°C to 85°C
04	87C51-16	8-bit microcontroller with one time programmable memory. (3.5 to 16MHz)	-40°C to 85°C
05	87C51	8-bit microcontroller with one time programmable memory. (3.5 to 12MHz)	-55°C to 125°C
06	87C51-16	8-bit microcontroller with one time programmable memory. (3.5 to 16MHz)	-55°C to 125°C
07	87C51	8-bit microcontroller with 4k-bytes one time programmable memory. (3.5 to 12MHz)	-55°C to 125°C
08	87C51-16	8-bit microcontroller with 4k-bytes one time programmable memory. (3.5 to 16MHz)	-55°C to 125°C

1.2.3 Device class designator. The device class designator is a single letter identifying the product assurance level as follows:

Device class	Device requirements documentation
M	Vendor self-certification to the requirements for MIL-STD-883 compliant, non-JAN class level B microcircuits in accordance with MIL-PRF-38535, appendix A
N	Certification and qualification to MIL-PRF-38535 with a nontraditional performance environment (encapsulated in plastic)
Q or V	Certification and qualification to MIL-PRF-38535

STANDARD MICROCIRCUIT DRAWING DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE A		5962-87684
		REVISION LEVEL G	SHEET 2

1.2.4 Case outline(s). The case outline(s) are as designated in MIL-STD-1835, JEDEC Publication 95, and as follows:

<u>Outline letter</u>	<u>Descriptive designator</u>	<u>Terminals</u>	<u>Package style</u>	<u>Document</u>
U	CQCC1-N44	44	Square leadless chip carrier <u>1/</u>	MIL-STD-1835
Q	CDIP2-T40 or GDIP1-T40	40	Dual-in-line <u>1/</u>	MIL-STD-1835
M	GQCC1-J44	44	J-leaded chip carrier <u>1/</u>	MIL-STD-1835
X	See figure 1	40	Plastic dual-in-line	JEP 95
Y	See figure 1	44	Plastic J-leaded chip carrier	JEP 95

1.2.5 Lead finish. The lead finish is as specified in MIL-PRF-38535 for device classes N, Q, and V or MIL-PRF-38535, appendix A for device class M.

1.3 Absolute maximum ratings. 2/

Storage temperature range	-65°C to +150°C
Voltage on EA/V _{PP} pin to V _{SS}	0 V dc to +13.0 V dc
Voltage on any pin to V _{SS}	-0.5 V dc to +6.5 V dc
Power dissipation (P _D)	1.5 W
Maximum junction temperature (T _J)	+200°C
Lead temperature (soldering, 10 seconds)	+300°C
Thermal resistance, junction-to-case (θ _{JC}):	
Cases U, Q, and M	See MIL-STD-1835
Case X	15°C/W
Case Y	14°C/W

1.4 Recommended operating conditions.

Supply voltage (V _{CC})	5.0 V dc ±10%
Case operating temperature range (T _C)	
Devices 01, 02, 05, 06, 07, 08	-55°C to +125°C
Devices 03, 04	-40°C to +85°C
Maximum input low voltage (except EA)	0.2V _{CC} - 0.25 V
Maximum input low voltage (EA)	0.2V _{CC} - 0.45 V
Minimum input high voltage (except XTAL1, RESET)	0.2V _{CC} + 1.1 V
Minimum input high voltage (XTAL1 & RESET)	0.7V _{CC} + 0.2 V

1/ For device types 01 and 02 only, the lid shall be transparent to permit ultraviolet light erasure.

2/ Stresses above the absolute maximum rating may cause permanent damage to the device. Extended operation at the maximum levels may degrade performance and affect reliability.

2. APPLICABLE DOCUMENTS

2.1 Government specification, standards, and handbooks. The following specification, standards, and handbooks form a part of this drawing to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

DEPARTMENT OF DEFENSE SPECIFICATION

MIL-PRF-38535 - Integrated Circuits, Manufacturing, General Specification for.

DEPARTMENT OF DEFENSE STANDARDS

MIL-STD-883 - Test Method Standard Microcircuits.

MIL-STD-1835 - Interface Standard Electronic Component Case Outlines.

DEPARTMENT OF DEFENSE HANDBOOKS

MIL-HDBK-103 - List of Standard Microcircuit Drawings.

MIL-HDBK-780 - Standard Microcircuit Drawings.

(Copies of these documents are available online at <http://assist.daps.dla.mil/quicksearch/> or www.dodssp.daps.mil or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

2.2 Non-Government publications. The following documents form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation.

ELECTRONICS INDUSTRIES ALLIANCE (EIA)

JEP 95 - Registered and Standard Outlines for Semiconductor Devices

(Copies of this document are available online at www.eia.org/ or from the Electronics Industries Alliance, 2500 Wilson Boulevard, Arlington, VA 22201-3834).

2.3 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Item requirements. The individual item requirements for device classes N, Q, and V shall be in accordance with MIL-PRF-38535 and as specified herein or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein. The individual item requirements for device class M shall be in accordance with MIL-PRF-38535, appendix A for non-JAN class level B devices and as specified herein. This drawing has been modified to allow the manufacturer to use the alternate die/fabrication requirements of paragraph A.3.2.2 of MIL-PRF-38535 or other alternative approved by the qualifying activity.

3.2 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535 and herein for device classes N, Q, and V or MIL-PRF-38535, appendix A and herein for device class M.

3.2.1 Case outline(s). The case outline(s) shall be in accordance with 1.2.4 herein and figure 1.

3.2.2 Terminal connections. The terminal connections shall be as specified on figure 2.

3.2.3 Block diagram. The block diagram shall be as specified on figure 3.

3.2.4 Test circuit and switching waveforms. The test circuit and switching waveforms shall be as specified on figure 4.

3.3 Electrical performance characteristics and postirradiation parameter limits. Unless otherwise specified herein, the electrical performance characteristics and postirradiation parameter limits are as specified in table I and shall apply over the full case operating temperature range.

STANDARD MICROCIRCUIT DRAWING DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE A		5962-87684
		REVISION LEVEL H	SHEET 4

3.4 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table II. The electrical tests for each subgroup are defined in table I.

3.5 Marking. The part shall be marked with the PIN listed in 1.2 herein. In addition, the manufacturer's PIN may also be marked. For packages where marking of the entire SMD PIN number is not feasible due to space limitations, the manufacturer has the option of not marking the "5962-" on the device. For RHA product using this option, the RHA designator shall still be marked. Marking for device classes N, Q, and V shall be in accordance with MIL-PRF-38535. Marking for device class M shall be in accordance with MIL-PRF-38535, appendix A.

3.5.1 Certification/compliance mark. The certification mark for device classes N, Q, and V shall be a "QML" or "Q" as required in MIL-PRF-38535. The compliance mark for device class M shall be a "C" as required in MIL-PRF-38535, appendix A. For product built in accordance with A.3.2.2 of MIL-PRF-38535, or as modified in the manufacturer's QM plan, the "QD" certification mark shall be used in place of the "Q" or "QML" certification mark.

3.6 Certificate of compliance. For device classes N, Q, and V, a certificate of compliance shall be required from a QML-38535 listed manufacturer in order to supply to the requirements of this drawing (see 6.6.1 herein). For device class M, a certificate of compliance shall be required from a manufacturer in order to be listed as an approved source of supply in MIL-HDBK-103 (see 6.6.2 herein). The certificate of compliance submitted to DSCC-VA prior to listing as an approved source of supply for this drawing shall affirm that the manufacturer's product meets, for device classes N, Q, and V, the requirements of MIL-PRF-38535 and herein or for device class M, the requirements of MIL-PRF-38535, appendix A and herein.

3.7 Certificate of conformance. A certificate of conformance as required for device classes N, Q, and V in MIL-PRF-38535 or for device class M in MIL-PRF-38535, appendix A shall be provided with each lot of microcircuits delivered to this drawing.

3.8 Notification of change for device class M. For device class M, notification to DSCC-VA of change of product (see 6.2 herein) involving devices acquired to this drawing is required for any change that affects this drawing.

3.9 Verification and review for device class M. For device class M, DSCC, DSCC's agent, and the acquiring activity retain the option to review the manufacturer's facility and applicable required documentation. Offshore documentation shall be made available onshore at the option of the reviewer.

3.10 Microcircuit group assignment for device class M. Device class M devices covered by this drawing shall be in microcircuit group number 105 (see MIL-PRF-38535, appendix A).

3.11 Processing EPROMS. All testing requirements and quality assurance provisions herein shall be satisfied by the manufacturer prior to delivery.

3.11.1 Erasure of EPROMS. When specified, devices shall be erased in accordance with the procedures and characteristics specified in 4.5.

3.11.2 Programmability of EPROMS. When specified, devices shall be programmed to the specified pattern using the procedures and characteristics specified in 4.6 and table III.

3.11.3 Verification of erasure of programmability of EPROMS. When specified, devices shall be verified as either programmed to the specified pattern or erased. As a minimum, verification shall consist of performing a functional test (subgroup 7) to verify that all bits are in the proper state. Any bit that does not verify to be in the proper state shall constitute a device failure, and shall be removed from the lot.

TABLE I. Electrical performance characteristics – Continued.

Test	Symbol	Conditions <u>1/</u> $4.5\text{ V} \leq V_{CC} \leq 5.5\text{ V}$ unless otherwise specified	Group A subgroups	Device type	Limits		Unit
					Min	Max	
Clock rising edge to input data valid		See figure 4 <u>2/ 4/ 5/</u>	9, 10, 11	01, 03, 05, 07	700		ns
			9, 10, 11	02, 04, 06, 08	484		
			9, 10, 11	All	$10t_{CLCL}$ -133		
High time	t_{CHCX}		9, 10, 11	All	20		ns
Low time	t_{CLCX}		9, 10, 11	All	20		ns
Rise time	t_{CLCH}		9, 10, 11	All		20	ns
Fall time	t_{CHCL}		9, 10, 11	All		20	ns

- 1/ All testing to be performed using worst-case test conditions unless otherwise specified. The case operating temperature of each device shall be as specified in paragraph 1.4.
- 2/ Guaranteed, if not tested, to the limits specified.
- 3/ I_{CC} is measured with all output pins disconnected: XTAL1 driven with t_{CLCH} , $t_{CHCL} = 5\text{ ns}$, $V_{IL} = V_{SS} + 0.5\text{ V}$, $V_{IH} = V_{CC} - 0.5\text{ V}$ measured with $\overline{EA}$ and RESET connected to V_{CC} . "Idle" current is measured with $\overline{EA}$ and RESET connected to V_{SS} . "Power down" current is measured with EA connected to V_{SS} and RESET connected to V_{SS} .
- 4/ Due to test equipment limitations, actual tested values may differ from those specified, but specified limits are guaranteed.
- 5/ All devices to be tested at 16 MHz only, but guaranteed across the specified operating frequency. Devices not meeting the limits of the 16 MHz devices may be retested to be supplied at the slower 12 MHz speed grade.
- 6/ Parametric values are based on a 12 MHz oscillator for device types 01 and 07, a 16 MHz oscillator for devices type 02 and 08, and a variable oscillator for all other devices.
- 7/ When using timing equations, the minimum value shall not be less than 5 ns.
- 8/ Parametric values are typical values rather than minimum values.

AC inputs during testing are driven at $V_{CC} - 0.5$ V for a logic '1' and 0.45 V for a logic '0'. Timing measurements are made at V_{IH} minimum for a logic '1' and V_{IL} maximum for a logic '0'.

For timing purposes, a port pin ceases floating when a 100 mV change from load voltage occurs and begins floating when a 100 mV change from loaded V_{OH} or V_{OL} level occurs. I_{OL} or $I_{OH} \geq \pm 20$ mA.

4. VERIFICATION

4.1 Sampling and inspection. For device classes N, Q, and V, sampling and inspection procedures shall be in accordance with MIL-PRF-38535 or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein. For device class M, sampling and inspection procedures shall be in accordance with MIL-PRF-38535, appendix A.

4.2 Screening. For device classes N, Q, and V, screening shall be in accordance with MIL-PRF-38535, and shall be conducted on all devices prior to qualification and technology conformance inspection. For device class M, screening shall be in accordance with method 5004 of MIL-STD-883, and shall be conducted on all devices prior to quality conformance inspection.

4.2.1 Additional criteria for device class M.

a. Burn-in test, method 1015 of MIL-STD-883.

(1) Test condition A, B, C, or D. The test circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1015.

(2) $T_A = +125^{\circ}\text{C}$, minimum.

b. Interim and final electrical test parameters shall be as specified in table II herein.

c. A data retention stress test shall be included as part of the screening procedure and shall consist of the following steps:

Margin test method A.

- (1) Program greater than 95 percent of the bit locations, including the slowest programming cell (see 3.11.2). The remaining cells shall provide a worst case speed pattern.
- (2) Bake, unbiased, for 72 hours at 140°C to screen for data retention lifetime.
- (3) Perform a margin test using $V_m = 5.9\text{ V}$ at 25°C using loose timing (i.e., $T_{ACC} > 1\text{ }\mu\text{s}$).
- (4) Perform dynamic burn-in (see 4.2.1a).
- (5) Margin at $V_m = 5.9\text{ V}$.
- (6) Perform electrical tests (see 4.2).
- (7) Erase (see 3.11.1), except devices submitted for groups A, B, C, and D testing.
- (8) Verify erasure (see 3.11.3).

Margin test method B.

- (1) Program at $+25^{\circ}\text{C}$ 100 percent of the bits.
- (2) Bake, unbiased, for 24 hours at $+250^{\circ}\text{C}$.
- (3) Perform margin test at $V_m = 5.9\text{ V}$.
- (4) Erase (see 3.11.1).
- (5) Perform interim electrical tests in accordance with table IIA.
- (6) For device types 01, 02 Program 100% of the bits and verify (see 3.11.2).
- (7) Perform burn-in (see 4.2.1a).

STANDARD MICROCIRCUIT DRAWING DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE A		5962-87684
		REVISION LEVEL G	SHEET 22

(8) One-hundred percent test at 25°C (group A, subgroups 1 and 7). $V_m = 5.9$ V with loose timing, apply PDA. For device types 03 - 08, the virgin state of the device must be verified.

(9) Perform remaining final electrical subgroups and group A testing.

(10) For device types 01, 02, erase devices may be submitted for groups B, C, and D at this time.

(11) For device types 01, 02, verify erasure (see 3.11.3). Steps 1 through 4 are performed at wafer level.

4.2.2 Additional criteria for device classes N, Q, and V.

- a. The burn-in test duration, test condition and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document revision level control of the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1015 of MIL-STD-883.
- b. Interim and final electrical test parameters shall be as specified in table II herein.
- c. Additional screening for device class V beyond the requirements of device class Q shall be as specified in MIL-PRF-38535, appendix B.

4.3 Qualification inspection for device classes N, Q, and V. Qualification inspection for device classes N, Q, and V shall be in accordance with MIL-PRF-38535. Inspections to be performed shall be those specified in MIL-PRF-38535 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.4).

4.4 Conformance inspection. Technology conformance inspection for classes N, Q, and V shall be in accordance with MIL-PRF-38535 including groups A, B, C, D, and E inspections and as specified herein. Quality conformance inspection for device class M shall be in accordance with MIL-PRF-38535, appendix A and as specified herein. Inspections to be performed for device class M shall be those specified in method 5005 of MIL-STD-883 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.4).

4.4.1 Group A inspection.

- a. Tests shall be as specified in table II herein.
- b. For device class M, subgroups 7 and 8 tests shall be sufficient to verify the truth table. For device classes N, Q, and V, subgroups 7 and 8 shall include verifying the functionality of the device.
- c. Subgroup 4 (C_{IO} measurement) shall be measured only for the initial test and after process or design changes which may affect capacitance. A minimum sample size of 5 devices with zero rejects shall be required.
- d. All devices selected for testing shall have the EPROM programmed with a checkerboard pattern or equivalent. After completion of all testing, the devices shall be erased and verified (except devices submitted for groups C and D testing).
- e. The device types 03 - 08 shall be tested for programmability and AC performance compliance to the requirements of group A, subgroups 9, 10, 11. Either of the two techniques is acceptable.
 - (1) Testing the entire lot using additional built in test circuitry which allows the manufacturer to verify programmability and AC performance without programming user array. If this is done, the resulting test patterns shall be verified on all devices during subgroups 9, 10, 11, group A testing per the sampling plan specified in MIL-STD-883, method 5005.
 - (2) If such compliance cannot be tested on an unprogrammed device, a sample shall be selected to satisfy programmability requirements prior to performing subgroups 9, 10, 11. Twelve devices shall be submitted to programming. If more than 2 devices fail to program, the lot shall be rejected. At the manufacturer's option, the sample may be increased to 24 total devices with no more than 4 total device failures allowable. (Ten devices from the programmability sample shall be submitted to the requirements of group A, subgroups 9, 10, 11. If more than 2 total devices fail, the lot shall be rejected. At the manufacturer's option, the sample may be increased to 20 total devices with no more than 4 total device failures allowable.)

TABLE II. Electrical test requirements.

Test requirements	Subgroups (in accordance with MIL-STD-883, method 5005, table I)	Subgroups (in accordance with MIL-PRF-38535, table III)		
	Device class M	Device class N	Device class Q	Device class V
Interim electrical parameters (see 4.2)				1, 7
Final electrical parameters (see 4.2)	<u>1/</u> 1, 2, 3, 7, 8, 9, 10, 11	<u>2/</u> 1, 2, 3, 7, 8, 9, 10, 11	<u>1/</u> 1, 2, 3, 7, 8, 9, 10, 11	<u>1/</u> 1, 2, 3, 7, 8, 9, 10, 11
Group A test requirements (see 4.4)	1, 2, 3, 4, 7, 8, 9, 10, 11	1, 2, 3, 4, 7, 8, 9, 10, 11	1, 2, 3, 4, 7, 8, 9, 10, 11	1, 2, 3, 4, 7, 8, 9, 10, 11
Group C end-point electrical parameters (see 4.4)	2, 8a, 10	2, 8a, 10	2, 8a, 10	2, 8a, 10
Group D end-point electrical parameters (see 4.4)	2, 8a, 10	2, 8a, 10	2, 8a, 10	2, 8a, 10
Group E end-point electrical parameters (see 4.4)	2, 8a, 10	2, 8a, 10	2, 8a, 10	2, 8a, 10

1/ PDA applies to subgroup 1 and 7.

2/ PDA applies to subgroups 2 and 8.

4.4.2 Group C inspection. The group C inspection end-point electrical parameters shall be as specified in table II herein.

4.4.2.1 Additional criteria for device class M. Steady-state life test conditions, method 1005 of MIL-STD-883:

- Test condition A, B, C, or D. The test circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1005 of MIL-STD-883.
- $T_A = +125^{\circ}\text{C}$, minimum.
- Test duration: 1,000 hours, except as permitted by method 1005 of MIL-STD-883.

4.4.2.2 Additional criteria for device classes N, Q, and V. The steady-state life test duration, test condition and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The test circuit shall be maintained under document revision level control by the device manufacturer's TRB in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1005 of MIL-STD-883.

- For device types 01 and 02, all devices selected for testing shall be programmed with a checkerboard pattern or equivalent. After completion of all testing, the devices shall be erased and verified.
- For device types 03 - 08, the programmability shall be verified per 4.4.1e

4.4.3 Group D inspection. The group D inspection end-point electrical parameters shall be as specified in table II herein.

STANDARD MICROCIRCUIT DRAWING DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE A		5962-87684
		REVISION LEVEL G	SHEET 24

4.4.4 Group E inspection. Group E inspection is required only for parts intended to be marked as radiation hardness assured (see 3.5 herein).

- a. End-point electrical parameters shall be as specified in table II herein.
- b. For device classes N, Q, and V, the devices or test vehicle shall be subjected to radiation hardness assured tests as specified in MIL-PRF-38535 for the RHA level being tested. For device class M, the devices shall be subjected to radiation hardness assured tests as specified in MIL-PRF-38535, appendix A for the RHA level being tested. All device classes must meet the postirradiation end-point electrical parameter limits as defined in table I at $T_A = +25^{\circ}\text{C} \pm 5^{\circ}\text{C}$, after exposure, to the subgroups specified in table II herein.

4.5 Erasing procedure. The recommended erasure procedure is exposure to ultraviolet light (at 2537 Angstroms) to an integrated dose of at least 15 W-s/cm^2 . Exposing the EPROM to an ultraviolet lamp of $12,000 \mu\text{W/cm}^2$ rating for 20 to 30 minutes, at a distance of about 1 inch, should be sufficient.

4.6 Programming procedures. The programming characteristics in table III and the following procedures shall be used for programming the device.

- a. Connect the device in the electrical configuration (see figure 5) for programming. The waveforms of figure 6 and programming characteristics of table III shall apply.
- b. Initially and after each erasure, all bits are in the high "H" state. Information is introduced by selectively programming "L" into the desired bit locations. A programmed "L" can be changed to an "H" by ultraviolet light erasure (see 4.5).

TABLE III. Programming characteristics.

Parameter	Symbol	Conditions	Limits		Unit
			Min	Max	
Programming supply voltage	V_{PP}	See figures 5, 6 1/	12.5	13.0	V
Programming supply current	I_{PP}			50	mA

5. PACKAGING

5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-PRF-38535 for device classes N, Q, and V or MIL-PRF-38535, appendix A for device class M.

6. NOTES

6.1 Intended use. Microcircuits conforming to this drawing are intended for use for Government microcircuit applications (original equipment), design applications, and logistics purposes.

6.1.1 Replaceability. Microcircuits covered by this drawing will replace the same generic device covered by a contractor prepared specification or drawing.

6.1.2 Substitutability. Device class Q devices will replace device class M devices.

6.2 Configuration control of SMD's. All proposed changes to existing SMD's will be coordinated with the users of record for the individual documents. This coordination will be accomplished using DD Form 1692, Engineering Change Proposal.

6.3 Record of users. Military and industrial users should inform Defense Supply Center Columbus (DSCC) when a system application requires configuration control and which SMD's are applicable to that system. DSCC will maintain a record of users and this list will be used for coordination and distribution of changes to the drawings. Users of drawings covering microelectronic devices (FSC 5962) should contact DSCC-VA, telephone (614) 692-0544.

6.4 Comments. Comments on this drawing should be directed to DSCC-VA, Columbus, Ohio 43218-3990, or telephone (614) 692-0547.

6.5 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-38535 and MIL-HDBK-1331 and as follows:

Port 0. Port 0 is an 8-bit open drain bidirectional I/O port. Port 0 pins that have 1's written to them float, and in that state can be used as high-impedance inputs.

Port 0 is also the multiplexed low-order address and data bus during accesses to external program and data memory. In this application it uses strong internal pullups when emitting 1's. Port 0 also receives the code bytes during EPROM programming, and outputs the code bytes during program verification. External pullups are required during program verification.

Port 1. Port 1 is an 8-bit bidirectional I/O port with internal pullups. Port 1 pins that have 1's written to them are pulled high by the internal pullups, and in that state can be used as inputs. As inputs, port 1 pins that are externally being pulled low will source current (I_{IL}) because of the internal pullups.

Port 1 also receives the low-order address bytes during EPROM programming and program verification.

Port 2. Port 2 is an 8-bit bidirectional I/O port with internal pullups. Port 2 pins that have 1's written to them are pulled high by the internal pullups, and in that state can be used as inputs. As inputs, port 2 pins that are externally being pulled low will source current (I_{IL}) because of the internal pullups.

Port 2 emits the high-order address byte during fetches from external program memory and during accesses to external data memory that use 16-bit addresses (MOVX at DPTR). In this application it uses strong internal pullups when emitting 1's. During accesses to external data memory that used 8-bit addresses (MOVX at Ri), Port 2 emits the contents of the P2 special function register. Port 2 also receives some control signals and the high order address bits during EPROM programming and program verification.

Port 3. Port 3 is an 8-bit bidirectional I/O port with internal pullups. Port 3 pins that have 1's written to them are pulled high by the internal pullups, and in that state can be used as inputs. As inputs, port 3 pins that are externally being pulled low will source current (I_{IL}) because of the pull-ups.

STANDARD MICROCIRCUIT DRAWING DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE A		5962-87684
		REVISION LEVEL G	SHEET 28

Port 3 also serves the functions of various special features of the MCS-51 family, as listed below:

Port pin	Alternate function
P3.0	RXD (serial input port)
P3.1	<u>TXD</u> (serial output port)
P3.2	<u>INT0</u> (external interrupt 0)
P3.3	INT1 (external interrupt 1)
P3.4	T0 (Timer 0 external input)
P3.5	<u>T1</u> (Timer 1 external input)
P3.6	<u>WR</u> (external data memory write strobe)
P3.7	RD (external data memory read strobe)

Port 3 also receives some control signals for EPROM programming and program verification.

RST. Reset input. A logic high on this pin for two machine cycles while the oscillator is running resets the device. An internal pulldown resistor permits a power-on reset to be generated using only an external capacitor to V_{CC}.

ALE/PROG. Address latch enable output pulse for latching the low byte of the address during accesses to external memory. This pin is also the program pulse input (PROG) during EPROM programming.

In normal operation ALE is emitted at a constant rate of 1/6 the oscillator frequency, and may be used for external timing or clocking purposes. Note, however, that one ALE pulse is skipped during each access to external data memory.

PSEN. Program store enable is the read strobe to external program memory. When the device is executing from internal program memory, PSEN is inactive (high). When the device is executing code from external program memory, PSEN is activated twice each machine cycle, except that two PSEN activations are skipped during each access to external data memory.

EA/V_{PP}. External access enable. EA must be externally held low in order to enable the device to fetch code from external program memory locations 0000H to 0FFFFH. If either of the lock bits is programmed, the logic level at EA is internally latched during reset. EA must be strapped to V_{CC} for internal program execution. This pin also receives the 12.75 V programming supply voltage (V_{PP}) during EPROM programming.

XTAL1. Output from the inverting oscillator amplifier and input to the internal block generator circuits.

XTAL2. Output from the inverting oscillator amplifier.

6.6 Sources of supply.

6.6.1 Sources of supply for device classes N, Q, and V. Sources of supply for device classes N, Q, and V are listed in QML-38535. The vendors listed in QML-38535 have submitted a certificate of compliance (see 3.6 herein) to DSCC-VA and have agreed to this drawing.

6.6.2 Approved sources of supply for device class M. Approved sources of supply for class M are listed in MIL-HDBK-103. The vendors listed in MIL-HDBK-103 have agreed to this drawing and a certificate of compliance (see 3.6 herein) has been submitted to and accepted by DSCC-VA.

6.7 Supersession Data. The PIN supersession data shall be as follows:

NEW PIN	OLD PIN
5962-8768401MQX	5962-8768401QX
5962-8768401MUX	5962-8768401UX
5962-8768402MQX	5962-8768402QX
5962-8768402MUX	5962-8768402UX

STANDARD MICROCIRCUIT DRAWING BULLETIN

DATE: 07-09-04

Approved sources of supply for SMD 5962-87684 are listed below for immediate acquisition information only and shall be added to MIL-HDBK-103 and QML-38535 during the next revision. MIL-HDBK-103 and QML-38535 will be revised to include the addition or deletion of sources. The vendors listed below have agreed to this drawing and a certificate of compliance has been submitted to and accepted by DSCC-VA. This information bulletin is superseded by the next dated revision of MIL-HDBK-103 and QML-38535.

- 1/ The lead finish shown for each PIN representing a hermetic package is the most readily available from the manufacturer listed for that part. If the desired lead finish is not listed contact the vendor to determine its availability.
- 2/ Caution. Do not use this number for item acquisition. Items acquired to this number may not satisfy the performance requirements of this drawing.
- 3/ Not available from an approved source of supply.
