

Current Mode PWM Controller

FEATURES

- Automatic Feed Forward Compensation
- Programmable Pulse-by-Pulse Current Limiting
- Automatic Symmetry Correction in Push-pull Configuration
- Enhanced Load Response Characteristics
- Parallel Operation Capability for Modular Power Systems
- Differential Current Sense Amplifier with Wide Common Mode Range
- Double Pulse Suppression
- 500mA (Peak) Totem-pole Outputs
- $\pm 1\%$ Bandgap Reference
- Under-voltage Lockout
- Soft Start Capability
- Shutdown Terminal
- 500kHz Operation

DESCRIPTION

The UC1846/7 family of control ICs provides all of the necessary features to implement fixed frequency, current mode control schemes while maintaining a minimum external parts count. The superior performance of this technique can be measured in improved line regulation, enhanced load response characteristics, and a simpler, easier-to-design control loop. Topological advantages include inherent pulse-by-pulse current limiting capability, automatic symmetry correction for push-pull converters, and the ability to parallel "power modules" while maintaining equal current sharing.

Protection circuitry includes built-in under-voltage lockout and programmable current limit in addition to soft start capability. A shutdown function is also available which can initiate either a complete shutdown with automatic restart or latch the supply off.

Other features include fully latched operation, double pulse suppression, deadline adjust capability, and a $\pm 1\%$ trimmed bandgap reference.

The UC1846 features low outputs in the OFF state, while the UC1847 features high outputs in the OFF state.

BLOCK DIAGRAM

ABSOLUTE MAXIMUM RATINGS (Note 1)

Supply Voltage (Pin 15)	+40V
Collector Supply Voltage (Pin 13)	+40V
Output Current, Source or Sink (Pins 11, 14)	500mA
Analog Inputs (Pins 3, 4, 5, 6, 16)	-0.3V to $+V_{IN}$
Reference Output Current (Pin 2)	-30mA
Sync Output Current (Pin 10)	-5mA
Error Amplifier Output Current (Pin 7)	-5mA
Soft Start Sink Current (Pin 1)	50mA
Oscillator Charging Current (Pin 9)	5mA
Power Dissipation at $T_A=25^{\circ}\text{C}$	1000mW
Power Dissipation at $T_C=25^{\circ}\text{C}$	2000mW
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10 seconds)	+300°C

Note 1. All voltages are with respect to Ground, Pin 13. Currents are positive into, negative out of the specified terminal. Consult Packaging Section of Databook for thermal limitations and considerations of packages. Pin numbers refer to DIL and SOIC packages only.

Note 2. These parameters, although guaranteed over the recommended operating conditions, are not 100% tested in production.

Note 3. Parameter measured at trip point of latch with VPIN 5 = VREF, VPIN 6 = 0V.

Note 4. Amplifier gain defined as: $G = \frac{\Delta V_{PIN7}}{\Delta V_{PIN4}}$; $V_{PIN4} = 0$ to 1.0V

Note 5. Applies to UC1846/UC2846/UC3846 only due to polarity of outputs.

Note 6. Current into Pin 1 guaranteed to latch circuit in shutdown state.

Note 7. Current into Pin 1 guaranteed not to latch circuit in shutdown state.

APPLICATIONS DATA

Oscillator Circuit

Output deadtime is determined by the external capacitor, CT, according to the formula: $\tau_d (\mu s) = 145CT (\mu f) \left(\frac{ID}{ID - \frac{3.6}{RT (k\Omega)}} \right)$.

ID = Oscillator discharge current at 25°C is typically 7.5.

For large values of RT: $\tau_d (\mu s) \approx 145CT (\mu f)$.

Oscillator frequency is approximated by the formula: $fT (kHz) \approx \frac{2.2}{RT (k\Omega) \cdot CT (\mu f)}$.

Error Amp Gain and Phase vs Frequency

Error Amp Open-Logic D.C. Gain vs Load Resistance

Parallel Operation

APPLICATIONS DATA (cont.)

Pulse by Pulse Current Limiting

Soft Start and Shutdown /Restart Functions

A small RC filter may be required in some applications to reduce switch transients. Differential input allows remote, noise free sensing.

The diagram illustrates the UC1846 PWM controller circuit. The central component is the UC1846 chip, with pins 1 through 16 labeled. The circuit includes several key components and connections:

- Timing Resistor:** A network of resistors (150k, 10k, 1.8k) connected to pins 9 and 8.
- Timing Capacitor:** A network of capacitors (0.1μF, 1nF, 4.7nF) connected to pins 8 and 4.
- 2N222 Transistor:** A transistor connected to pins 9 and 8, with a 1kΩ resistor and a 400Ω resistor connected to its base.
- Current Limit Adjust:** A 10 Turn potentiometer connected to pins 4 and 1, with a 1kΩ resistor and a 400Ω resistor connected to its wiper.
- Shutdown:** A network of resistors (2k, 1k) connected to pins 16 and 13, with a 0.1μF capacitor connected to pin 16.
- Output Stages:** Two output stages (Out A and Out B) connected to pins 14 and 11, with 150Ω resistors connected to pins 14 and 11.
- Power Supply:** Various power supply connections including +5V, +12V, VREF (+5V Output), VIN (+12V), and a ground connection for normal operation.

The diagram also includes a 'Sawtooth' waveform and a 'Current Limit Adjust' label.

- Bypass Caps Should Be Low ESR & ESL Type
- Short Pins 6 & 7 for Unity Gain Testing

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
