

8-Ch/Dual 4-Ch High-Performance CMOS Analog Multiplexers

FEATURES

- Low On-Resistance— $r_{DS(on)}$: 100 Ω
- Low Charge Injection— Q : 20 pC
- Fast Transition Time— t_{TRANS} : 160 ns
- Low Power— I_{SUPPLY} : 10 μ A
- Single Supply Capability
- 44-V Supply Max Rating
- TTL Compatible Logic

BENEFITS

- Reduced Switching Errors
- Reduced Glitching
- Improved Data Throughput
- Reduced Power Consumption
- Increased Ruggedness
- Wide Supply Ranges (± 5 V to ± 20 V)

APPLICATIONS

- Data Acquisition Systems
- Audio Signal Routing
- ATE Systems
- Battery Powered Systems
- High Rel Systems
- Single Supply Systems
- Medical Instrumentation

DESCRIPTION

The DG408 is an 8-channel single-ended analog multiplexer designed to connect one of eight inputs to a common output as determined by a 3-bit binary address (A_0 , A_1 , A_2). The DG409 is a dual 4-channel differential analog multiplexer designed to connect one of four differential inputs to a common dual output as determined by its 2-bit binary address (A_0 , A_1). Break-before-make switching action protects against momentary crosstalk between adjacent channels.

An on channel conducts current equally well in both directions. In the off state each channel blocks voltages up to the power supply rails. An enable (EN) function allows the user to reset the multiplexer/demultiplexer to all switches off for stacking several devices. All control inputs, address (A_x) and enable (EN) are TTL compatible over the full specified operating temperature range.

Applications for the DG408/409 include high speed data acquisition, audio signal switching and routing, ATE systems, and avionics. High performance and low power dissipation make them ideal for battery operated and remote instrumentation applications.

Designed in the 44-V silicon-gate CMOS process, the absolute maximum voltage rating is extended to 44 V. Additionally, single supply operation is also allowed. An epitaxial layer prevents latchup.

For additional information please see Technical Article TA201 (FaxBack Number 70600).

ABSOLUTE MAXIMUM RATINGS

Voltage Referenced to V-

V+ 44 V

GND 25 V

Digital Inputs^a, V_S, V_D (V-) -2 V to (V+) +2 V or
20 mA, whichever occurs first

Current (Any Terminal) 30 mA

Peak Current, S or D

(Pulsed at 1 ms, 10% Duty Cycle Max) 100 mA

Storage Temperature (AK Suffix) -65 to 150°C
(DJ, DY Suffix) -65 to 125°C

Power Dissipation (Package)^b

16-Pin Plastic DIP^c 450 mW

16-Pin Narrow SOIC and TSSOP^d 600 mW

16-Pin CerDIP^e 900 mW

LCC-20^f 750 mW

Notes

- Signals on S_X, D_X or I_{NX} exceeding V+ or V- will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
- All leads soldered or welded to PC board.
- Derate 6 mW/°C above 75°C.
- Derate 7.6 mW/°C above 75°C.
- Derate 12 mW/°C above 75°C.
- Derate 10 mW/°C above 75°C.

Notes

- Refer to PROCESS OPTION FLOWCHART.
- Room = 25°C, Full = as determined by the operating temperature suffix.
- Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
- The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
- Guaranteed by design, not subject to production test.
- V_{IN} = input voltage to perform proper function.
- $\Delta r_{DS(on)} = r_{DS(on)} \text{ Max} - r_{DS(on)} \text{ Min}$.
- Worst case isolation occurs on Channel 4 do to proximity to the drain pin.

APPLICATION HINTS

Overvoltage Protection

A very convenient form of overvoltage protection consists of adding two small signal diodes (1N4148, 1N914 type) in series with the supply pins (see Figure 10). This arrangement effectively blocks the flow of reverse currents. It also floats the supply pin above or below the normal $V+$ or $V-$ value. In this case the overvoltage signal actually becomes the power

supply of the IC. From the point of view of the chip, nothing has changed, as long as the difference $V_S - (V_-)$ doesn't exceed +44 V. The addition of these diodes will reduce the analog signal range to 1 V below $V+$ and 1 V above $V-$, but it preserves the low channel resistance and low leakage characteristics.
