**DGG OR DGV PACKAGE** 

(TOP VIEW)

- **Member of the Texas Instruments** Widebus™ Family
- Optimized for 1.8-V Operation and is 3.6-V I/O Tolerant to Support Mixed-Mode Signal Operation
- Ioff Supports Partial-Power-Down Mode Operation
- Sub 1-V Operable
- Max t<sub>pd</sub> of 2 ns at 1.8 V
- Low Power Consumption, 20-μA Max I<sub>CC</sub>
- ±8-mA Output Drive at 1.8 V
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- **ESD Protection Exceeds JESD 22** 
  - 2000-V Human-Body Model (A114-A)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)

## description/ordering information

16-bit (dual-octal) noninverting bus transceiver is operational at 0.8-V to 2.7-V V<sub>CC</sub>, but is designed specifically for 1.65-V to 1.95-V V<sub>CC</sub> operation.

The SN74AUC16245 is designed asynchronous communication between data buses. The control-function implementation minimizes external timing requirements.

This device can be used as two 8-bit transceivers or one 16-bit transceiver. It allows data transmission from the A bus to the B bus or from the B bus to the A bus, depending on the logic level at the direction-control (DIR) input. The output-enable  $(\overline{OE})$  input can be used to disable the device so that the buses are effectively isolated.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

This device is fully specified for partial-power-down applications using Ioff. The Ioff circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

#### ORDERING INFORMATION

TA	PACKAC	∋E†	ORDERABLE PART NUMBER	TOP-SIDE MARKING

SCES392E - MARCH 2002 - REVISED DECEMBER 2002

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V <sub>CC</sub>	0.5 V to 3.6 V
Input voltage range, V <sub>I</sub> (see Note 1)	0.5 V to 3.6 V
Voltage range applied to any output in the high-impedance or power-off state, VO	
(see Note 1)	–0.5 V to 3.6 V
Output voltage range, VO (see Note 1)	$\dots$ -0.5 V to V <sub>CC</sub> + 0.5 V
Input clamp current, $I_{ K }(V_{ C } < 0)$	–50 mA
Output clamp current, I <sub>OK</sub> (V <sub>O</sub> < 0)	–50 mA
Continuous output current, IO	±20 mA
Continuous current through V <sub>CC</sub> or GND	±100 mA
Package thermal impedance, θ <sub>JA</sub> (see Note 2): DGG package	70°C/W
DGV package	58°C/W
GQL package	42°C/W
Storage temperature range, T <sub>stq</sub>	–65°C to 150°C

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

2. The package thermal impedance is calculated in accordance with JESD 51-7.

## recommended operating conditions (see Note 3)

			MIN	MAX	UNIT	
Vcc	Supply voltage		0.8	2.7	V	
		V <sub>CC</sub> = 0.8 V	Vcc			
$V_{\text{IH}}$	High-level input voltage	$V_{CC} = 1.1 \text{ V to } 1.95 \text{ V}$	0.65 × V <sub>CC</sub>		V	
		$V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$	1.7			
		V <sub>CC</sub> = 0.8 V		0		
$V_{IL}$	Low-level input voltage	$V_{CC} = 1.1 \text{ V to } 1.95 \text{ V}$		$0.35 \times V_{CC}$	V	
		V <sub>CC</sub> = 2.3 V to 2.7 V		0.7		
VI	Input voltage		0	3.6	V	
.,	Output wells as	Active state	0	VCC	V	
VO	Output voltage	3-state	0	3.6	V	
		V <sub>CC</sub> = 0.8 V		-0.7		
		V <sub>CC</sub> = 1.1 V		-3		
loh	High-level output current	V <sub>CC</sub> = 1.4 V		-5	mA	
		$V_{CC} = 1.65 \text{ V}$	V <sub>CC</sub> = 1.65 V		1	
		V <sub>CC</sub> = 2.3 V		-9		
		V <sub>CC</sub> = 0.8 V		0.7		
		V <sub>CC</sub> = 1.1 V		3		
loL	Low-level output current	$V_{CC} = 1.4 \text{ V}$		5	mA	
		V <sub>CC</sub> = 1.65 V		8		
		V <sub>CC</sub> = 2.3 V		9		
Δt/Δν	Input transition rise or fall rate			5	ns/V	
T <sub>A</sub>	Operating free-air temperature		-40	85	°C	

NOTE 3: All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

<sup>(1)</sup> Status: For more details on status, see our product life cycle.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

<sup>(2)</sup> Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

<sup>(4)</sup> Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.
