## AT09336: USB Device Interface (UDI) for Human Interface Device Mouse (HID Mouse)

---

### APPLICATION NOTE

## Introduction

USB Device Interface (UDI) for Human Interface Device Mouse (HID mouse) provides an interface for the configuration and management of USB HID mouse device.

The outline of this documentation is as follows:

- [API Overview](#)
- [Quick Start Guide for USB Device Mouse Module \(UDI Mouse\)](#)
- [Configuration File Examples](#)

For more details for Atmel® Software Framework (ASF) USB Device Stack and USB Device HID Mouse, refer to following application notes:

- [AVR4900: ASF - USB Device Stack](#)
- [AVR4903: ASF - USB Device HID Mouse Application](#)
- [AVR4920: ASF - USB Device Stack - Compliance and Performance Figures](#)
- [AVR4921: ASF - USB Device Stack Differences between ASF V1 and V2](#)

## 2. API Overview

### 2.1. Variable and Type Definitions

#### 2.1.1. Interface with USB Device Core (UDC)

Structure required by UDC.

##### 2.1.1.1. Variable udi\_api\_hid\_mouse

```
UDC_DESC_STORAGE udi_api_t udi_api_hid_mouse
```

Global structure which contains standard UDI API for UDC.

### 2.2. Structure Definitions

#### 2.2.1. Struct udi\_hid\_mouse\_desc\_t

Interface descriptor structure for HID mouse.

Table 2-1. Members

Type	Name	Description
usb_ep_desc_t	ep	Standard USB endpoint descriptor structure
usb_hid_descriptor_t	hid	HID Descriptor
usb_iface_desc_t	iface	Standard USB interface descriptor structure

#### 2.2.2. Struct udi\_hid\_mouse\_report\_desc\_t

Report descriptor for HID mouse.

Table 2-2. Members

Type	Name	Description
uint8_t	array[]	Array to put detailed report data

### 2.3. Macro Definitions

#### 2.3.1. USB Interface Descriptors

The following structures provide predefined USB interface descriptors. It must be used to define the final USB descriptors.

##### 2.3.1.1. Macro UDI\_HID\_MOUSE\_STRING\_ID

```
#define UDI_HID_MOUSE_STRING_ID
```

By default no string associated to this interface.

#### 2.3.1.2. Macro UDI\_HID\_MOUSE\_EP\_SIZE

```
#define UDI_HID_MOUSE_EP_SIZE
```

HID mouse endpoints size.

#### 2.3.1.3. Macro UDI\_HID\_MOUSE\_DESC

```
#define UDI_HID_MOUSE_DESC
```

Content of HID mouse interface descriptor for all speed.

### 2.3.2. Interfaces for Buttons Events

#### 2.3.2.1. Macro HID\_MOUSE\_BTN\_DOWN

```
#define HID_MOUSE_BTN_DOWN
```

Value to signal a button down (pressed).

#### 2.3.2.2. Macro HID\_MOUSE\_BTN\_UP

```
#define HID_MOUSE_BTN_UP
```

Value to signal a button up (released).

## 2.4. Function Definitions

### 2.4.1. Interfaces for Mouse Events

#### 2.4.1.1. Function udi\_hid\_mouse\_moveScroll()

Move the scroll wheel.

```
bool udi_hid_mouse_moveScroll(  
    int8_t pos)
```

Table 2-3. Parameters

Data direction	Parameter name	Description
[in]	pos	Signed value to move

#### Returns

1 if function was successfully done, otherwise 0.

#### 2.4.1.2. Function udi\_hid\_mouse\_moveY()

Move the mouse pointer on Y axe.

```
bool udi_hid_mouse_moveY(  
    int8_t pos_y)
```

**Table 2-4. Parameters**

Data direction	Parameter name	Description
[in]	pos_y	Signed value to move

**Returns**

1 if function was successfully done, otherwise 0.

**2.4.1.3. Function udi\_hid\_mouse\_moveX()**

Move the mouse pointer on X axe.

```
bool udi_hid_mouse_moveX(
    int8_t pos_x)
```

**Table 2-5. Parameters**

Data direction	Parameter name	Description
[in]	pos_x	Signed value to move

**Returns**

1 if function was successfully done, otherwise 0.

**2.4.2. Interfaces for Buttons Events****2.4.2.1. Function udi\_hid\_mouse\_btnclick()**

Changes click button state.

```
bool udi_hid_mouse_btnclick(
    bool b_state)
```

**Table 2-6. Parameters**

Data direction	Parameter name	Description
[in]	b_state	New button state

**Returns**

1 if function was successfully done, otherwise 0.

**2.4.2.2. Function udi\_hid\_mouse\_btnclick()**

Changes middle button state.

```
bool udi_hid_mouse_btnclick(
    bool b_state)
```

**Table 2-7. Parameters**

Data direction	Parameter name	Description
[in]	b_state	New button state

**Returns**

1 if function was successfully done, otherwise 0.

**2.4.2.3. Function udi\_hid\_mouse\_btnleft()**

Changes left button state.

```
bool udi_hid_mouse_btnleft(  
    bool b_state)
```

**Table 2-8. Parameters**

Data direction	Parameter name	Description
[in]	b_state	New button state

**Returns**

1 if function was successfully done, otherwise 0.

### 3. Quick Start Guide for USB Device Mouse Module (UDI Mouse)

This is the quick start guide for the [USB Device Mouse Module \(UDI Mouse\)](#) with step-by-step instructions on how to configure and use the modules in a selection of use cases.

The use cases contain several code fragments. The code fragments in the steps for setup can be copied into a custom initialization function, while the steps for usage can be copied into, e.g., the main application function.

#### 3.1. Basic Use Case

In this basic use case, the "USB HID Mouse (Single Interface Device)" module is used. The "USB HID Mouse (Composite Device)" module usage is described in [Advanced Use Cases](#).

#### 3.2. Setup Steps

As a USB device, it follows common USB device setup steps. Refer to [USB Device Basic Setup](#).

#### 3.3. Usage Steps

##### 3.3.1. Example Code

Content of conf\_usb.h:

```
#define UDI_HID_MOUSE_ENABLE_EXT() my_callback_mouse_enable()  
extern bool my_callback_mouse_enable(void);  
#define UDI_HID_MOUSE_DISABLE_EXT() my_callback_mouse_disable()  
extern void my_callback_mouse_disable(void);  
#include "udi_hid_mouse_conf.h" // At the end of conf_usb.h file
```

Add to application C-file:

```
static bool my_flag_authorize_mouse_events = false;  
bool my_callback_mouse_enable(void)  
{  
    my_flag_authorize_mouse_events = true;  
    return true;  
}  
void my_callback_mouse_disable(void)  
{  
    my_flag_authorize_mouse_events = false;  
}  
  
void my_button_press_event(void)  
{  
    if (!my_flag_authorize_mouse_events) {  
        return;  
    }  
    udi_hid_mouse_btnleft(HID_MOUSE_BTN_DOWN);  
}
```

### 3.3.2. Workflow

1. Ensure that conf\_usb.h is available and contains the following configuration which is the USB device mouse configuration:

```
#define UDI_HID_MOUSE_ENABLE_EXT() my_callback_mouse_enable()  
extern bool my_callback_mouse_enable(void);
```

**Note:** After the device enumeration (detecting and identifying USB devices), the USB host starts the device configuration. When the USB mouse interface from the device is accepted by the host, the USB host enables this interface and the UDI\_HID\_MOUSE\_ENABLE\_EXT() callback function is called and return true. Thus, it is recommended to enable sensors used by the mouse in this function.

```
#define UDI_HID_MOUSE_DISABLE_EXT() my_callback_mouse_disable()  
extern void my_callback_mouse_disable(void);
```

**Note:** When the USB device is unplugged or is reset by the USB host, the USB interface is disabled and the UDI\_HID\_MOUSE\_DISABLE\_EXT() callback function is called. Thus, it is recommended to disable sensors used by the mouse in this function.

2. Send mouse events:

```
// Sends a value at scroll wheel  
udi_hid_mouse_moveScroll(int8_t pos);  
// Sends an Y axis value at mouse pointer  
udi_hid_mouse_moveY(int8_t pos_y);  
// Sends an X axis value at mouse pointer  
udi_hid_mouse_moveX(int8_t pos_x);  
// Sends a middle click event  
udi_hid_mouse_btnmiddle(bool b_state);  
// Sends a right click event  
udi_hid_mouse_btnclick(bool b_state);  
// Sends a left click event  
udi_hid_mouse_btnclick(bool b_state);
```

## 3.4. Advanced Use Cases

For more advanced use of the UHI HID mouse module, see the following use cases:

- [HID Mouse in a Composite Device](#)
- [Change USB Speed](#)
- [Use USB Strings](#)
- [Use USB Remote Wakeup Feature](#)
- [Bus Power Application Recommendations](#)
- [USB Dynamic Serial Number](#)

## 3.5. HID Mouse in a Composite Device

A USB Composite Device is a USB Device which uses more than one USB class. In this use case, the "USB HID Mouse (Composite Device)" module is used to create a USB composite device. Thus, this USB module can be associated with another "Composite Device" module, like "USB MSC (Composite Device)".

Also, you can refer to application note [AVR4902 ASF - USB Composite Device](#).

### 3.5.1. Setup Steps

For the setup code of this use case to work, the [Basic Use Case](#) must be followed.

### 3.5.2. Usage Steps

#### 3.5.2.1. Example Code

Content of conf\_usb.h:

```
#define USB_DEVICE_EP_CTRL_SIZE 64
#define USB_DEVICE_NB_INTERFACE (X+1)
#define USB_DEVICE_MAX_EP (X+1)

#define UDI_HID_MOUSE_EP_IN (X | USB_EP_DIR_IN)
#define UDI_HID_MOUSE_IFACE_NUMBER X

#define UDI_COMPOSITE_DESC_T \
    udi_hid_mouse_desc_t udi_hid_mouse; \
    ...
#define UDI_COMPOSITE_DESC_FS \
    .udi_hid_mouse = UDI_HID_MOUSE_DESC, \
    ...
#define UDI_COMPOSITE_DESC_HS \
    .udi_hid_mouse = UDI_HID_MOUSE_DESC, \
    ...
#define UDI_COMPOSITE_API \
    &udi_api_hid_mouse, \
    ...
```

#### 3.5.2.2. Workflow

1. Ensure that conf\_usb.h is available and contains the following parameters required for a USB composite device configuration:

```
// Endpoint control size, This must be:
// - 8 for low speed
// - 8, 16, 32 or 64 for full speed device (8 is recommended to save RAM)
// - 64 for a high speed device
#define USB_DEVICE_EP_CTRL_SIZE 64
// Total Number of interfaces on this USB device.
// Add 1 for HID mouse.
#define USB_DEVICE_NB_INTERFACE (X+1)
// Total number of endpoints on this USB device.
// This must include each endpoint for each interface.
// Add 1 for HID mouse.
#define USB_DEVICE_MAX_EP (X+1)
```

2. Ensure that conf\_usb.h contains the description of composite device:

```
// The endpoint number chosen by you for the mouse.
// The endpoint number starting from 1.
#define UDI_HID_MOUSE_EP_IN (X | USB_EP_DIR_IN)
// The interface index of an interface starting from 0
#define UDI_HID_MOUSE_IFACE_NUMBER X
```

3. Ensure that conf\_usb.h contains the following parameters required for a USB composite device configuration:

```
// USB Interfaces descriptor structure
#define UDI_COMPOSITE_DESC_T \
    ...
    udi_hid_mouse_desc_t udi_hid_mouse; \
```

```

...
// USB Interfaces descriptor value for Full Speed
#define UDI_COMPOSITE_DESC_FS \
...
.udl_hid_mouse = UDI_HID_MOUSE_DESC, \
...
// USB Interfaces descriptor value for High Speed
#define UDI_COMPOSITE_DESC_HS \
...
.udl_hid_mouse = UDI_HID_MOUSE_DESC, \
...
// USB Interface APIs
#define UDI_COMPOSITE_API \
...
&udi_api_hid_mouse, \
...

```

**Note:** The descriptors order given in the four lists above must be the same as the order defined by all interface indexes. The interface index orders are defined through UDI\_X\_IFACE\_NUMBER defines.

## 3.6. Change USB Speed

In this use case, the USB device is used with different USB speeds.

### 3.6.1. Setup Steps

Prior to implement this use case, be sure to have already applied the UDI module "basic use case".

### 3.6.2. Usage Steps

#### 3.6.2.1. Example Code

Content of conf\_usb.h:

```

#if // Low speed
#define USB_DEVICE_LOW_SPEED
// #define USB_DEVICE_HS_SUPPORT

#elif // Full speed
// #define USB_DEVICE_LOW_SPEED
// #define USB_DEVICE_HS_SUPPORT
#elif // High speed
// #define USB_DEVICE_LOW_SPEED
#define USB_DEVICE_HS_SUPPORT

#endif

```

#### 3.6.2.2. Workflow

1. Ensure that conf\_usb.h is available and contains the following parameters required for a USB device low speed (1.5Mbit/s):

```

#define USB_DEVICE_LOW_SPEED
// #define USB_DEVICE_HS_SUPPORT

```

2. Ensure that conf\_usb.h contains the following parameters required for a USB device full speed (12Mbit/s):

```
//#define USB_DEVICE_LOW_SPEED  
//#define USB_DEVICE_HS_SUPPORT
```

3. Ensure that conf\_usb.h contains the following parameters required for a USB device high speed (480Mbit/s):

```
//#define USB_DEVICE_LOW_SPEED  
#define USB_DEVICE_HS_SUPPORT
```

## 3.7. Use USB Strings

In this use case, the usual USB strings are added in the USB device.

### 3.7.1. Setup Steps

Prior to implement this use case, be sure to have already applied the UDI module "basic use case".

### 3.7.2. Usage Steps

#### 3.7.2.1. Example Code

Content of conf\_usb.h:

```
#define USB_DEVICE_MANUFACTURE_NAME "Manufacture name"  
#define USB_DEVICE_PRODUCT_NAME "Product name"  
#define USB_DEVICE_SERIAL_NAME "12...EF"
```

#### 3.7.2.2. Workflow

1. Ensure that conf\_usb.h is available and contains the following parameters required to enable different USB strings:

```
// Static ASCII name for the manufacture  
#define USB_DEVICE_MANUFACTURE_NAME "Manufacture name"
```

```
// Static ASCII name for the product  
#define USB_DEVICE_PRODUCT_NAME "Product name"
```

```
// Static ASCII name to enable and set a serial number  
#define USB_DEVICE_SERIAL_NAME "12...EF"
```

## 3.8. Use USB Remote Wakeup Feature

In this use case, the USB remote wakeup feature is enabled.

### 3.8.1. Setup Steps

Prior to implement this use case, be sure to have already applied the UDI module "basic use case".

### 3.8.2. Usage Steps

#### 3.8.2.1. Example Code

Content of conf\_usb.h:

```
#define USB_DEVICE_ATTR \
(USB_CONFIG_ATTR_REMOTE_WAKEUP | USB_CONFIG_ATTR_..._POWERED)
#define UDC_REMOTEWAKEUP_ENABLE() my_callback_remotewakeup_enable()
extern void my_callback_remotewakeup_enable(void);
#define UDC_REMOTEWAKEUP_DISABLE() my_callback_remotewakeup_disable()
extern void my_callback_remotewakeup_disable(void);
```

Add to application C-file:

```
void my_callback_remotewakeup_enable(void)
{
// Enable application wakeup events (e.g. enable GPIO interrupt)
}
void my_callback_remotewakeup_disable(void)
{
// Disable application wakeup events (e.g. disable GPIO interrupt)
}

void my_interrupt_event(void)
{
    udc_remotewakeup();
}
```

#### 3.8.2.2. Workflow

1. Ensure that conf\_usb.h is available and contains the following parameters required to enable the remote wakeup feature:

```
// Authorizes the remote wakeup feature
#define USB_DEVICE_ATTR (USB_CONFIG_ATTR_REMOTE_WAKEUP |
USB_CONFIG_ATTR_..._POWERED)

// Define callback called when the host enables the remotewakeup feature
#define UDC_REMOTEWAKEUP_ENABLE() my_callback_remotewakeup_enable()
extern void my_callback_remotewakeup_enable(void);

// Define callback called when the host disables the remotewakeup feature
#define UDC_REMOTEWAKEUP_DISABLE() my_callback_remotewakeup_disable()
extern void my_callback_remotewakeup_disable(void);
```

2. Send a remote wakeup (USB upstream):

```
udc_remotewakeup();
```

## 3.9. Bus Power Application Recommendations

In this use case, the USB device bus power feature is enabled. This feature requires a correct power consumption management.

#### 3.9.1. Setup Steps

Prior to implement this use case, be sure to have already applied the UDI module "basic use case".

### 3.9.2. Usage Steps

#### 3.9.2.1. Example Code

Content of conf\_usb.h:

```
#define USB_DEVICE_ATTR (USB_CONFIG_ATTR_BUS_POWERED)
#define UDC_SUSPEND_EVENT() user_callback_suspend_action()
extern void user_callback_suspend_action(void)
#define UDC_RESUME_EVENT() user_callback_resume_action()
extern void user_callback_resume_action(void)
```

Add to application C-file:

```
void user_callback_suspend_action(void)
{
    // Disable hardware component to reduce power consumption
}
void user_callback_resume_action(void)
{
    // Re-enable hardware component
}
```

#### 3.9.2.2. Workflow

1. Ensure that conf\_usb.h is available and contains the following parameters:

```
// Authorizes the BUS power feature
#define USB_DEVICE_ATTR (USB_CONFIG_ATTR_BUS_POWERED)

// Define callback called when the host suspend the USB line
#define UDC_SUSPEND_EVENT() user_callback_suspend_action()
extern void user_callback_suspend_action(void);

// Define callback called when the host or device resume the USB line
#define UDC_RESUME_EVENT() user_callback_resume_action()
extern void user_callback_resume_action(void);
```

2. Reduce power consumption in suspend mode (max. 2.5mA on VBUS):

```
void user_callback_suspend_action(void)
{
    turn_off_components();
}
```

## 3.10. USB Dynamic Serial Number

In this use case, the USB serial strings are dynamic. For a static serial string refer to [Use USB Strings](#).

#### 3.10.1. Setup Steps

Prior to implement this use case, be sure to have already applied the UDI module "basic use case".

#### 3.10.2. Usage Steps

##### 3.10.2.1. Example Code

Content of conf\_usb.h:

```
#define USB_DEVICE_SERIAL_NAME
#define USB_DEVICE_GET_SERIAL_NAME_POINTER serial_number
```

```
#define USB_DEVICE_GET_SERIAL_NAME_LENGTH 12
extern uint8_t serial_number[];
```

Add to application C-file:

```
uint8_t serial_number[USB_DEVICE_GET_SERIAL_NAME_LENGTH];
void init_build_usb_serial_number(void)
{
    serial_number[0] = 'A';
    serial_number[1] = 'B';
    ...
    serial_number[USB_DEVICE_GET_SERIAL_NAME_LENGTH-1] = 'C';
}
```

### 3.10.2.2. Workflow

1. Ensure that conf\_usb.h is available and contains the following parameters required to enable a USB serial number string dynamically:

```
#define USB_DEVICE_SERIAL_NAME // Define this empty
#define USB_DEVICE_GET_SERIAL_NAME_POINTER serial_number // Give
serial array pointer
#define USB_DEVICE_GET_SERIAL_NAME_LENGTH 12 // Give size of serial
array
extern uint8_t serial_number[]; // Declare external serial array
```

2. Before starting USB stack, initialize the serial array:

```
uint8_t serial_number[USB_DEVICE_GET_SERIAL_NAME_LENGTH];
void init_build_usb_serial_number(void)
{
    serial_number[0] = 'A';
    serial_number[1] = 'B';
    ...
    serial_number[USB_DEVICE_GET_SERIAL_NAME_LENGTH-1] = 'C';
}
```

## 4. Configuration File Examples

### 4.1. conf\_usb.h

#### 4.1.1. UDI HID MOUSE Single

```
/*

```

## 5. USB Device Basic Setup

### 5.1. Custom Configuration

The following USB Device configuration must be included in the conf\_usb.h file of the application:

**1. USB\_DEVICE\_VENDOR\_ID** (Word).

Vendor ID provided by USB org (Atmel 0x03EB).

**2. USB\_DEVICE\_PRODUCT\_ID** (Word).

Product ID (Referenced in usb\_atmel.h).

**3. USB\_DEVICE\_MAJOR\_VERSION** (Byte).

Major version of the device.

**4. USB\_DEVICE\_MINOR\_VERSION** (Byte).

Minor version of the device.

**5. USB\_DEVICE\_MANUFACTURE\_NAME** (string).

ASCII name for the manufacture.

**6. USB\_DEVICE\_PRODUCT\_NAME** (string).

ASCII name for the product.

**7. USB\_DEVICE\_SERIAL\_NAME** (string).

ASCII name to enable and set a serial number.

**8. USB\_DEVICE\_POWER** (Numeric).

(unit mA) Maximum device power.

**9. USB\_DEVICE\_ATTR** (Byte).

USB attributes available:

- **USB\_CONFIG\_ATTR\_SELF\_POWERED**
- **USB\_CONFIG\_ATTR\_REMOTE\_WAKEUP**

**Note:** If remote wake is enabled, this defines remotewakeup callbacks.

**10. USB\_DEVICE\_LOW\_SPEED** (Only defined).

Force the USB Device to run in low speed.

**11. USB\_DEVICE\_HS\_SUPPORT** (Only defined).

Authorize the USB Device to run in high speed.

**12. USB\_DEVICE\_MAX\_EP** (Byte).

Define the maximum endpoint number used by the USB Device.

This one is already defined in the UDI default configuration. E.g.:

- When endpoint control 0x00, endpoint 0x01, and endpoint 0x82 is used, then **USB\_DEVICE\_MAX\_EP=2**
- When only endpoint control 0x00 is used, then **USB\_DEVICE\_MAX\_EP=0**

- When endpoint 0x01 and endpoint 0x81 is used, then USB\_DEVICE\_MAX\_EP=1 (configuration not possible on USBB interface)

## 5.2. VBUS Monitoring

The VBUS monitoring is used only for USB SELF Power application.

- By default the USB device is automatically attached when VBUS is high or when USB starts for devices without internal VBUS monitoring. conf\_usb.h file does not contain definition USB\_DEVICE\_ATTACH\_AUTO\_DISABLE.

```
//#define USB_DEVICE_ATTACH_AUTO_DISABLE
```

- Add custom VBUS monitoring. conf\_usb.h file contains define USB\_DEVICE\_ATTACH\_AUTO\_DISABLE:

```
#define USB_DEVICE_ATTACH_AUTO_DISABLE
```

User C-file contains:

```
// Authorize VBUS monitoring
if (!udc_include_vbus_monitoring()) {
    // Implement custom VBUS monitoring via GPIO or other
}
Event_VBUS_present() // VBUS interrupt or GPIO interrupt or other
{
    // Attach USB Device
    udc_attach();
}
```

- Case of battery charging. conf\_usb.h file contains define USB\_DEVICE\_ATTACH\_AUTO\_DISABLE:

```
#define USB_DEVICE_ATTACH_AUTO_DISABLE
```

User C-file contains:

```
Event VBUS present() // VBUS interrupt or GPIO interrupt or ...
{
    // Authorize battery charging, but wait key press to start USB.
}
Event Key press()
{
    // Stop batteries charging
    // Start USB
    udc_attach();
}
```

## 5.3. USB Device Basic Setup

### 5.3.1. USB Device Controller (UDC) - Prerequisites

Common prerequisites for all USB devices.

This module is based on USB device stack full interrupt driven, and supporting sleepmgr. For AVR® and Atmel® | SMART ARM®-based SAM3/4 devices the clock services is supported. For SAM D21 devices the clock driver is supported.

The following procedure must be executed to set up the project correctly:

- Specify the clock configuration:
  - XMEGA® USB devices need 48MHz clock input. XMEGA USB devices need CPU frequency higher than 12MHz. You can use either an internal RC 48MHz auto calibrated by Start of Frames or an external OSC.
  - UC3 and SAM3/4 devices without USB high speed support need 48MHz clock input. You must use a PLL and an external OSC.
  - UC3 and SAM3/4 devices with USB high speed support need 12MHz clock input. You must use an external OSC.
  - UC3 devices with USBC hardware need CPU frequency higher than 25MHz
  - SAM D21 devices without USB high speed support need 48MHz clock input. You should use DFLL with USBCRM.
- In conf\_board.h, the define CONF\_BOARD\_USB\_PORT must be added to enable USB lines. (Not mandatory for all boards).
- Enable interrupts
- Initialize the clock service

The usage of sleep manager service is optional, but recommended to reduce power consumption:

- Initialize the sleep manager service
- Activate sleep mode when the application is in IDLE state

For AVR and SAM3/4 devices, add to the initialization code:

```
sysclk_init();
irq_initialize_vectors();
cpu_irq_enable();
board_init();
sleepmgr_init(); // Optional
```

For SAM D21 devices, add to the initialization code:

```
system_init();
irq_initialize_vectors();
cpu_irq_enable();
sleepmgr_init(); // Optional
```

Add to the main IDLE loop:

```
sleepmgr_enter_sleep(); // Optional
```

### 5.3.2. USB Device Controller (UDC) - Example Code

Common example code for all USB devices.

Content of conf\_usb.h:

```
#define USB_DEVICE_VENDOR_ID 0x03EB
#define USB_DEVICE_PRODUCT_ID 0xFFFF
#define USB_DEVICE_MAJOR_VERSION 1
#define USB_DEVICE_MINOR_VERSION 0
#define USB_DEVICE_POWER 100
#define USB_DEVICE_ATTR_USB_CONFIG_ATTR_BUS_POWERED
```

Add to application C-file:

```
void usb_init(void)
{
```

```

    udc_start();
}

```

### 5.3.3. USB Device Controller (UDC) - Workflow

Common workflow for all USB devices.

1. Ensure that `conf_usb.h` is available and contains the following configuration, which is the main USB device configuration:

```

// Vendor ID provided by USB org (Atmel 0x03EB)
#define USB_DEVICE_VENDOR_ID 0x03EB // Type Word
// Product ID (Atmel PID referenced in usb_atmel.h)
#define USB_DEVICE_PRODUCT_ID 0xFFFF // Type Word
// Major version of the device
#define USB_DEVICE_MAJOR_VERSION 1 // Type Byte
// Minor version of the device
#define USB_DEVICE_MINOR_VERSION 0 // Type Byte
// Maximum device power (mA)
#define USB_DEVICE_POWER 100 // Type 9-bits
// USB attributes to enable features
#define USB_DEVICE_ATTR_USB_CONFIG_ATTR_BUS_POWERED // Flags

```

2. Call the USB device stack start function to enable stack and start USB:

```
udc_start();
```

**Note:** In case of USB dual roles (Device and Host) managed through USB OTG connector (USB ID pin), the call of `udc_start()` must be removed and replaced by `uhc_start()`. Refer to section "Dual roles" for further information in the application note: [Atmel AVR4950: ASF - USB Host Stack](#)

### 5.4. conf\_clock.h Examples

Content of XMEGA `conf_clock.h`:

```

// Configuration based on internal RC:
// USB clock need of 48MHz
#define CONFIG_USBCLK_SOURCE          USBCLK_SRC_RCOSC
#define CONFIG_OSC_RC32_CAL           48000000UL
#define CONFIG_OSC_AUTOCAL_RC32MHZ_REF_OSC  OSC_ID_USBSOF
// CPU clock need of clock > 12MHz to run with USB (Here 24MHz)
#define CONFIG_SYSCLK_SOURCE          SYSCLK_SRC_RC32MHZ
#define CONFIG_SYSCLK_PSADIV          SYSCLK_PSADIV_2
#define CONFIG_SYSCLK_PSBCDIV         SYSCLK_PSBCDIV_1_1

```

Content of `conf_clock.h` for AT32UC3A0, AT32UC3A1, and AT32UC3B devices (USBB):

```

// Configuration based on 12MHz external OSC:
#define CONFIG_PLL1_SOURCE            PLL_SRC_OSC0
#define CONFIG_PLL1_MUL               8
#define CONFIG_PLL1_DIV               2
#define CONFIG_USBCLK_SOURCE          USBCLK_SRC_PLL1
#define CONFIG_USBCLK_DIV             1 // Fusb = Fsys/(2 ^ USB_div)

```

Content of `conf_clock.h` for AT32UC3A3 and AT32UC3A4 devices (USBB with high speed support):

```

// Configuration based on 12MHz external OSC:
#define CONFIG_USBCLK_SOURCE          USBCLK_SRC_OSC0
#define CONFIG_USBCLK_DIV              1 // Fusb = Fsys/(2 ^ USB_div)

```

Content of conf\_clock.h for AT32UC3C, ATUCXXD, ATUCXXL3U, and ATUCXXL4U devices (USBC):

```
// Configuration based on 12MHz external OSC:  
#define CONFIG_PLL1_SOURCE          PLL_SRC_OSC0  
#define CONFIG_PLL1_MUL             8  
#define CONFIG_PLL1_DIV             2  
#define CONFIG_USBCLK_SOURCE        USBCLK_SRC_PLL1  
#define CONFIG_USBCLK_DIV           1 // Fusb = Fsys/(2 ^ USB_div)  
// CPU clock need of clock > 25MHz to run with USBC  
#define CONFIG_SYSCLK_SOURCE        SYSCLK_SRC_PLL1
```

Content of conf\_clock.h for SAM3S, SAM3SD, and SAM4S devices (UPD: USB Peripheral Device):

```
// PLL (B) Options (Fpll = (Fclk * PLL_mul) / PLL_div)  
#define CONFIG_PLL1_SOURCE          PLL_SRC_MAINCK_XTAL  
#define CONFIG_PLL1_MUL             16  
#define CONFIG_PLL1_DIV             2  
// USB Clock Source Options (Fusb = FpllX / USB_div)  
#define CONFIG_USBCLK_SOURCE        USBCLK_SRC_PLL1  
#define CONFIG_USBCLK_DIV           2
```

Content of conf\_clock.h for SAM3U device (UPDHS: USB Peripheral Device High Speed):

```
// USB Clock Source fixed at UPLL.
```

Content of conf\_clock.h for SAM3X and SAM3A devices (UOTGHS: USB OTG High Speed):

```
// USB Clock Source fixed at UPLL.  
#define CONFIG_USBCLK_SOURCE        USBCLK_SRC_UPLL  
#define CONFIG_USBCLK_DIV           1
```

Content of conf\_clocks.h for SAM D21 devices (USB):

```
// System clock bus configuration  
# define CONF_CLOCK_FLASH_WAIT_STATES           2  
  
// USB Clock Source fixed at DFLL.  
// SYSTEM_CLOCK_SOURCE_DFLL configuration - Digital Frequency Locked Loop  
# define CONF_CLOCK_DFLL_ENABLE                  true  
# define CONF_CLOCK_DFLL_LOOP_MODE              SYSTEM_CLOCK_DFLL_LOOP_MODE_USB_RECOVERY  
# define CONF_CLOCK_DFLL_ON_DEMAND               true  
  
// Set this to true to configure the GCLK when running clocks_init.  
// If set to false, none of the GCLK generators will be configured in clocks_init().  
# define CONF_CLOCK_CONFIGURE_GCLK               true  
  
// Configure GCLK generator 0 (Main Clock)  
# define CONF_CLOCK_GCLK_0_ENABLE                true  
# define CONF_CLOCK_GCLK_0_RUN_IN_STANDBY       true  
# define CONF_CLOCK_GCLK_0_CLOCK_SOURCE          SYSTEM_CLOCK_SOURCE_DFLL  
# define CONF_CLOCK_GCLK_0_PRESCALER             1  
# define CONF_CLOCK_GCLK_0_OUTPUT_ENABLE         false
```

**DISCLAIMER:** The information in this document is provided in connection with Atmel products. No license, express or implied, by estoppel or otherwise, to any intellectual property right is granted by this document or in connection with the sale of Atmel products. EXCEPT AS SET FORTH IN THE ATTEL TERMS AND CONDITIONS OF SALES LOCATED ON THE ATTEL WEBSITE, ATTEL ASSUMES NO LIABILITY WHATSOEVER AND DISCLAIMS ANY EXPRESS, IMPLIED OR STATUTORY WARRANTY RELATING TO ITS PRODUCTS INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT. IN NO EVENT SHALL ATTEL BE LIABLE FOR ANY DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE, SPECIAL OR INCIDENTAL DAMAGES (INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS AND PROFITS, BUSINESS INTERRUPTION, OR LOSS OF INFORMATION) ARISING OUT OF THE USE OR INABILITY TO USE THIS DOCUMENT, EVEN IF ATTEL HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. Atmel makes no representations or warranties with respect to the accuracy or completeness of the contents of this document and reserves the right to make changes to specifications and products descriptions at any time without notice. Atmel does not make any commitment to update the information contained herein. Unless specifically provided otherwise, Atmel products are not suitable for, and shall not be used in, automotive applications. Atmel products are not intended, authorized, or warranted for use as components in applications intended to support or sustain life.

**SAFETY-CRITICAL, MILITARY, AND AUTOMOTIVE APPLICATIONS DISCLAIMER:** Atmel products are not designed for and will not be used in connection with any applications where the failure of such products would reasonably be expected to result in significant personal injury or death ("Safety-Critical Applications") without an Atmel officer's specific written consent. Safety-Critical Applications include, without limitation, life support devices and systems, equipment or systems for the operation of nuclear facilities and weapons systems. Atmel products are not designed nor intended for use in military or aerospace applications or environments unless specifically designated by Atmel as military-grade. Atmel products are not designed nor intended for use in automotive applications unless specifically designated by Atmel as automotive-grade.
