
Introduction

HIGHLIGHTS

This section of the manual contains the following major topics:

1.0	Introduction	2
2.0	Device Structure	3
3.0	Development Support	4
4.0	Style and Symbol Conventions	5
5.0	Related Documents	6
6.0	Revision History	7

dsPIC33/PIC24 Family Reference Manual

1.0 INTRODUCTION

Microchip is a leading provider of microcontrollers (MCUs) and analog semiconductors. The company's focus is on developing products that meet the needs of the embedded control market. Microchip is a leading supplier of the following products:

- 8-bit general purpose microcontrollers (PIC® MCUs)
- 16-bit microcontrollers and 32-bit microcontrollers
- dsPIC® 16-bit Digital Signal Controllers (DSCs)
- Specialty and standard nonvolatile memory devices
- Security devices (KEELOQ®)
- Application-specific standard products

For a listing of the products Microchip offers, request a Microchip Product Line Card. This literature can be obtained from your local Microchip sales office or downloaded from the Microchip Website (www.microchip.com).

This manual explains the operation of the dsPIC33/PIC24 family architecture and peripheral modules, but does not cover the specifics of each device. For device-specific information, refer to the data sheet. The information available in the data sheet includes the following:

- Device memory map
- Device pinout and packaging details
- Device electrical specifications
- List of peripherals included in the device

Code examples are provided throughout this manual. These examples are for reference purposes only and may need to be modified to suit a specific processor or MPLAB® tools version.

2.0 DEVICE STRUCTURE

Each part of the dsPIC DSC device can be placed into one of the following groups:

- CPU Core
- System Integration
- Peripherals

2.1 CPU Core

The CPU core pertains to the basic features required to make the device operate. The following sections of the manual relate to the CPU core:

- “CPU”
- “Data Memory”
- “Program Memory”
- “Interrupts”

2.2 System Integration

System integration functions help to accomplish the following:

- Decrease system cost
- Increase system reliability
- Increase design flexibility

The following sections of the manual discuss dsPIC33/PIC24 system integration functions:

- “Flash Programming”
- “Oscillator”
- “Reset”
- “Watchdog Timer and Power-Saving Modes”
- “CodeGuard™ Security”
- “Programming and Diagnostics”
- “Device Configuration”

2.3 Peripherals

The dsPIC33/PIC24 device has many peripherals that allow it to be interfaced to external circuitry. The following sections of the manual discuss peripherals:

- “I/O Ports”
- “Timers”
- “Input Capture”
- “Output Compare”
- “High-Speed PWM”
- “Quadrature Encoder Interface (QEI)”
- “Analog-to-Digital Converter (ADC)”
- “UART”
- “Serial Peripheral Interface (SPI)”
- “Inter-Integrated Circuit (I²C)”
- “Data Converter Interface (DCI)”
- “Enhanced Controller Area Network (ECAN™)”
- “Direct Memory Access (DMA)”
- “USB On-The-Go (OTG)”
- “Comparator”
- “32-bit Programmable Cyclic Redundancy Check (CRC)”
- “Parallel Master Port (PMP)”
- “Real-Time Clock and Calendar (RTCC)”

dsPIC33/PIC24 Family Reference Manual

3.0 DEVELOPMENT SUPPORT

Microchip offers a wide range of development tools that allow you to efficiently develop and debug application code. The development tools generally fall into the following categories:

- Code generation
- Hardware and software debugging
- Device programming
- Product development boards

A full description of each of Microchip's development tools is provided in “**Development Tool Support**”. As new tools are developed, the latest product briefs and user's guides can be obtained from your local Microchip sales office or downloaded from the Microchip Website (www.microchip.com).

Microchip offers comprehensive development support in the following forms:

- Application notes
- Reference designs
- Microchip Website
- Local sales offices with Field Application Engineer (FAE) support
- Corporate support line

The Microchip Website (www.microchip.com) also lists additional Websites that may be useful references.

4.0 STYLE AND SYMBOL CONVENTIONS

Throughout this document, certain style and font format conventions are used. Most format conventions imply that a distinction should be made for the emphasized text.

Table 4-1 defines some of the symbols and terms used throughout this manual.

Table 4-1: Document Conventions

Symbol or Term	Description
set	To force a bit/register to a value of logic '1'.
clear	To force a bit/register to a value of logic '0'.
Reset	1) To force a register/bit to its default state. 2) A condition in which the device places itself after a device Reset occurs. Some bits will be set to '0' (such as interrupt enable bits), while others will be set to '1' (such as the I/O data direction bits).
0xnn or nnh	Designates the number 'nn' in the hexadecimal number system. These conventions are used in the code examples. For example, the designation 0x13F or 13Fh may be used.
B'bbbbbbbb'	Designates the number 'bbbbbbbb' in the binary number system. This convention is used in the text, and in figures and tables. For example, the designation B'10100000' may be used.
R-M-W	Read-Modify-Write. This occurs when a register or port is read, the value is modified and that value is then written back to the register or port. This action can occur from a single instruction (such as bit set, <code>BSET</code>) or a sequence of instructions.
: (colon)	Used to specify a range or the concatenation of registers/bits/pins. One example is TMR3:TMR2, which is the concatenation of two 16-bit registers to form a 32-bit timer value. Concatenation order (left-right) usually specifies a positional relationship (MSb to LSb, higher to lower).
[]	Specifies bit(s) locations in a particular register. One example is SRxMPT (SPIxSTAT[5]), which specifies the abbreviation of bit and the register name, and associated bits or bit positions.
MSb, LSb	Indicates the Least/Most Significant bit in a field.
MSB, LSB	Indicates the Least/Most Significant Byte in a field of bits.
msw, lsw	Indicates the least/most significant word in a field of bits.
Courier New Font	Used for code examples, binary numbers and for instruction mnemonics that appear in the text.
<i>Times New Roman Font (Italics)</i>	Used for equations.
Note	A Note presents information that we want to re-emphasize, either to help you avoid a common pitfall or to make you aware of operating differences between some device family members. A Note can be in a box, or when used in a table or figure, it is located at the bottom of the table or figure.

dsPIC33/PIC24 Family Reference Manual

5.0 RELATED DOCUMENTS

Microchip and other third party sources, offer additional documentation that can aid in your development with dsPIC33/PIC24 devices. The following lists contain the most common documentation, but other documents may also be available.

5.1 Microchip Documentation

Documentation related to dsPIC33/PIC24 devices is available from Microchip. Many of these documents provide application-specific information that includes many examples of using and programming dsPIC33 DSCs and PIC24 MCUs, which can help you when designing an application using one of our devices. For the latest published technical documentation, check the Microchip Website (www.microchip.com).

5.2 Third-Party Documentation

There are many documents available from third-party sources around the world. Microchip does not review these documents for technical accuracy. However, they may be a helpful source for understanding the operation of Microchip's dsPIC33/PIC24 devices. For third-party documentation related to the dsPIC33/PIC24 devices, refer to the Microchip Website (www.microchip.com).

6.0 REVISION HISTORY

Revision A (December 2008)

This is the initial released version of this document.

Revision B (April 2011)

This revision includes the following updates:

- The device list was updated (see [Introduction](#))
- PIC24E references were added
- Additional minor updates to text and formatting were made throughout the document

Revision C (August 2022)

This revision includes the following updates:

- Applied current Family Reference Manual format.
- Updated all dsPIC33E/PIC24E references to dsPIC/PIC24.

dsPIC33/PIC24 Family Reference Manual

NOTES:

Note the following details of the code protection feature on Microchip products:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
 - Microchip believes that its family of products is secure when used in the intended manner, within operating specifications, and under normal conditions.
 - Microchip values and aggressively protects its intellectual property rights. Attempts to breach the code protection features of Microchip product is strictly prohibited and may violate the Digital Millennium Copyright Act.
 - Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is "unbreakable" Code protection is constantly evolving. Microchip is committed to continuously improving the code protection features of our products.
-

This publication and the information herein may be used only with Microchip products, including to design, test, and integrate Microchip products with your application. Use of this information in any other manner violates these terms. Information regarding device applications is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. Contact your local Microchip sales office for additional support or, obtain additional support at <https://www.microchip.com/en-us/support/design-help/client-support-services>.

THIS INFORMATION IS PROVIDED BY MICROCHIP "AS IS". MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE, OR WARRANTIES RELATED TO ITS CONDITION, QUALITY, OR PERFORMANCE.

IN NO EVENT WILL MICROCHIP BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL, OR CONSEQUENTIAL LOSS, DAMAGE, COST, OR EXPENSE OF ANY KIND WHATSOEVER RELATED TO THE INFORMATION OR ITS USE, HOWEVER CAUSED, EVEN IF MICROCHIP HAS BEEN ADVISED OF THE POSSIBILITY OR THE DAMAGES ARE FORESEEABLE. TO THE FULLEST EXTENT ALLOWED BY LAW, MICROCHIP'S TOTAL LIABILITY ON ALL CLAIMS IN ANY WAY RELATED TO THE INFORMATION OR ITS USE WILL NOT EXCEED THE AMOUNT OF FEES, IF ANY, THAT YOU HAVE PAID DIRECTLY TO MICROCHIP FOR THE INFORMATION.

Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.
