INTRODUCTION

The LAN9253 and LAN9254 EtherCAT devices provide a variety of interfaces to operate in Microcontroller Expansion mode. Both devices communicate with the microcontroller through an SRAM-like client interface. The simple yet highly functional host bus interface provides a glueless connection to most common 8-bit or 16-bit microprocessors and microcontrollers as well as 32-bit microprocessors with an 8-bit or 16-bit external bus. Alternatively, the device can be accessed via SPI/SQI while also providing up to 16 inputs or outputs for general purpose usage. An SPI/SQI™ (Quad SPI) client controller provides a low pin count synchronous client interface that facilitates communication between the device and a host system.

This application note shows the different interfaces to connect the LAN9253 and LAN9254 devices with an external MCU.

LAN9253/LAN9254 CONNECTION INTERFACES

Below are the different connections for the LAN9253 and LAN9254 devices:

1. SPI Interface
2. SQI Interface
3. HBI Interface
 - a) HBI Multiplexer Interface
 - b) HBI Index mode
 - c) HBI Demultiplexer Interface (LAN9254 only)
4. GPIO Interface
 - a) 16-bit GPIO
 - b) 32-bit GPIO (LAN9254 only)

REGISTER DEFINITIONS

PDI Interface Register Definition

This section details the registers required to configure the Process Data Interface (PDI) for the LAN9253 and LAN9254 devices. The bit definitions of this register depend on the selected PDI mode (Process Data Interface [PDI_SELECT]) field in the PDI Configuration register.

Offset = 0150h

Size = 8 bits

Table 1 shows the PDI Configuration register for the Digital I/O mode.

TABLE 1: PDI CONFIGURATION REGISTER: DIGITAL I/O MODE

Bits	Default	Description
7:6	00b	Output Data Sample Selection 00 = End of Frame 01 = RESERVED 10 = DC SYNC0 event 11 = DC SYNC1 event See Note 1 .
5:4	00b	Input Data Sample Selection 00 = Start of frame 01 = Rising edge of LATCH_IN 10 = DC SYNC0 event 11 = DC SYNC1 event
3	0b	Watchdog Behavior 0 = Outputs are reset immediately after watchdog expires. 1 = Outputs are reset with the next output event that follows watchdog expiration.
2	0b	Unidirectional/Bidirectional Mode 0 = Unidirectional mode. Input/output direction of pins are configured individually. 1 = Bidirectional mode. All I/O pins are bidirectional. See Note 2 .

Note 1: If OUTVALID Mode = 1, output DATA is updated at Process Data Watchdog trigger event. (Output Data Sample Selection bit is ignored.)

2: Direction control must be set to input.

3: This overrides the Output Data Sample Selection bit.

TABLE 1: PDI CONFIGURATION REGISTER: DIGITAL I/O MODE (CONTINUED)

Bits	Default	Description
1	0b	OUTVALID Mode 0 = Output event signaling 1 = Process Data Watchdog trigger (WD_TRIG) signaling on OUTVALID. Output data is updated if watchdog is triggered. See Note 3 .
0	0b	OUTVALID Polarity 0 = Active-high 1 = Active-low

- Note 1:** If OUTVALID Mode = 1, output DATA is updated at Process Data Watchdog trigger event. (Output Data Sample Selection bit is ignored.)
- 2:** Direction control must be set to input.
- 3:** This overrides the Output Data Sample Selection bit.

TABLE 3: PDI CONFIGURATION REGISTER: BECKHOFF SPI MODE

Bits	Default	Description
7:6	00b	RESERVED See Note 1 .
5	0b	Data Out Sample Mode 0 = Normal sample (SPI_DO and SPI_DI are sampled at the same SPI_CLK edge.) 1 = Late sample (SPI_DO and SPI_DI are sampled at different SPI_CLK edges.)
4	0b	SCS# Polarity 0 = Active-low 1 = Active-high
3:2	00b	RESERVED See Note 2 .
1:0	00b	SPI Mode 00 = SPI mode 0 01 = SPI mode 1 10 = SPI mode 2 11 = SPI mode 3

Note 1: Set EEPROM value to 0.

Note 2: Set EEPROM value to 0.

Table 4 shows the PDI Configuration register for the HBI mode.

TABLE 4: PDI CONFIGURATION REGISTER: HBI MODE

Bits	Default	Description
7	0b	HBI ALE Qualification This configures the HBI interface to qualify the ALEHI and ALELO signals with the CS signal. 0 = Address input is latched with ALEHI and ALELO. 1 = Address input is latched with ALEHI and ALELO only when CS is active.
6	0b	HBI Read/Write Mode This configures the HBI interface for separate read and write signals or direction and enable signals. 0 = Read and write 1 = Direction and enable
5	0b	HBI Chip Select Polarity This configures the polarity of the HBI interface chip select signal. 0 = Active-low 1 = Active-high

Extended PDI Interface Register Definition

This section details the registers required to configure the extended PDI interface for the LAN9253 and LAN9254 devices. The extended PDI Configuration registers provide additional information, such as I/O type and I/O's direction, to the EtherCAT host. The bit definitions of this register are dependent on the selected PDI mode (Process Data Interface [PDI_SELECT]) field in the PDI Control register.

Offset = 0152h-0153h

Size = 16 bits

Table 5 and Table 6 show the extended PDI Configuration register for the Digital I/O mode for LAN9253 and LAN9254, respectively.

SUMMARY

In conclusion, the different PDI interfaces for LAN9253 and LAN9254 devices have been described in this application note. The SPI, SQI, and HBI interfaces on the LAN9253 and LAN9254 devices are extremely easy to configure and use with any external MCUs. This application note has also covered the connection arrangements for different interfaces and the configuration register values. Lastly, this document has featured the Digital I/O mode where the LAN9253 and LAN9254 devices may not require a connection to an external MCU.

THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or Field Application Engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://microchip.com/support>

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods being used in attempts to breach the code protection features of the Microchip devices. We believe that these methods require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Attempts to breach these code protection features, most likely, cannot be accomplished without violating Microchip's intellectual property rights.
- Microchip is willing to work with any customer who is concerned about the integrity of its code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is "unbreakable." Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication is provided for the sole purpose of designing with and using Microchip products.
