Functional Description

The LCX138 high-speed 1-of-8 decoder/demultiplexer accepts three binary weighted inputs (A₀, A₁, A₂) and, when enabled, provides eight mutually exclusive active-LOW outputs (O₀–O₇). The LCX138 features three Enable inputs, two active-LOW (E₁, E₂) and one active-HIGH (E₃). All outputs will be HIGH unless E₁ and E₂ are LOW and E₃ is HIGH. The LCX138 can be used as an 8-output demultiplexer by using one of the active LOW Enable inputs as the data input and the other Enable inputs as strobes. The Enable inputs which are not used must be permanently tied to their appropriate active-HIGH or active-LOW state.
